COVER: Many species of neotropical birds specialize on habitats dominated by bamboo. This issue of the *Condor* begins with a set of papers addressing their complex ecological relationships, understanding of which is essential to conserving these birds, many of which are rare, localized, nomadic, and poorly known. Photograph of a Buffy-fronted Seedeater (*Sporophila frontalis*) in *Guadua* bamboo at Reserva Ecológica Guapiaçu, Rio de Janeiro, Brazil, May 2008, by Leonardo Pimentel, savatta@bol.com.br.
