

Acknowledgments

The main support for this work came from the University of California Agricultural Experiment Station, the Miller Institute for Basic Research in Science on the Berkeley campus of the University, and the U. S. Public Health Service (Research grants E-1496A to F). Dr. W. E. China of the British Museum (Natural History) and Dr. Jacques Carayon of the Museum National d'Histoire Naturelle in Paris were close collaborators over the years, and the late Professor G. F. Ferris co-authored all the work until his untimely death in 1958. Dr. Norman T. Davis of the University of Connecticut (under Public Health Service grant E-3862) worked for a year at Berkeley on reproductive physiology and contributed much to the final manuscript. Dr. T. R. E. Southwood of Imperial College Field Station, Silwood Park, England, helped in many ways during his year at Berkeley.

Students and research assistants carried out a great deal of the laboratory work on the project. Of these, Norihiro Ueshima is solely responsible for the all-important work on cytogenetics and many of the experimental crosses; R. E. Ryckman did the original work on *Hesperocimex*; R. D. Lee, that on *Haematosiphon*; Jon Herring and Barbara Wilson, bibliography; Mrs. Valerie Williams Linsdale, much of the work on host selection and the biology of *Leptocimex duplicatus*; Alan Berryman, most of the behavior studies; P. D. Ashlock, preliminary work on computer analysis; Woodbridge H. Foster, experimental crosses in *Oeciacus*; and Barbara Wilson, descriptions of immature stages of *Oeciacus*, *Bucimex*, and *Leptocimex*, experimental crosses, and general assistance with illustrations. The original work of each assistant is acknowledged in the text.

It is a pleasure to acknowledge the dedicated work of those who carried this book through the various stages of production: Mrs. Muriel Allen (typing and index); Richard H. Foote (copy editing); Ralph W. Bunn (managing editor); I. H. Chamberlain (printer); James Haddock and Peter Rubtzoff (proof reading). Willis W. Wirth was chairman of the editorial board when the manuscript was first reviewed.

Support during visits and by loan of specimens is acknowledged to the following institutions and persons: The British Museum (Natural History), London (W. E. China); the U. S. National Museum, Washington,
