

About the Editors

Dr. William O. Lamp is an associate professor in the Department of Entomology at the University of Maryland, College Park. He received a B.S. degree in Zoology from the University of Nebraska in 1972, a Master's degree in Entomology from the Ohio State University in 1976, and a Ph.D. in Entomology and

Agronomy at the University of Nebraska in 1980. He served as an Assistant Professional Scientist at the Illinois Natural History Survey until moving to Maryland in 1985. His research spans plant-insect interactions in crop systems, and is currently investigating the impact of herbivory on the persistence and tolerance of forage crops. He also maintains an active program in aquatic entomology and ecology. He teaches courses and seminars in integrated pest management as well as freshwater biology. He is the author of eight book chapters and 33 scientific articles. He has promoted regional research involved with forage insect pests, served as editor for the *Journal of Agricultural and Urban Entomology* and *Forage and Grazinglands*, and has been active in a number of roles within the Entomological Society of America.

Dr. Richard C. Berberet is a professor in the Department of Entomology and Plant Pathology at Oklahoma State University. He received a B.A. degree in biology from Carroll College in Helena, MT in 1966 and a Ph.D. in Entomology at the University of Nebraska-Lincoln in 1971. He teaches courses in introductory entomology, insects of field crops, insect morphology, systematic entomology, host plant resistance, and integrated pest manage-

ment. His research areas have included development of pest management programs in peanuts and alfalfa, and for 25 years has been a lead scientist with the Alfalfa Integrated Management Program for Oklahoma and the Southern Great Plains. He has also conducted studies on defense mechanisms of phytophagous insects against parasitoids. He is the author of seven book chapters, over 70 scientific articles, and 130 extension-related publications. He has served on the Editorial Board for *Environmental Entomology*, Publications Council, and as chair of Section F of the Entomological Society of America. He has received the James A. Whatley Award for Research in Agriculture given by Oklahoma State University and is an Honorary Member of the North American Alfalfa Improvement Conference.

Dr. Leon Higley is a Professor of Entomology at the University of Nebraska-Lincoln, where he teaches and does research. Besides forage and field crop insects, his research interests include the physiological basis of plant-insect interactions, insect conservation, and forensic entomology.

He is the author of over 98 scientific papers, 27 book chapters, and wrote or edited 5 books, including another in the ESA handbook series, *The Handbook of Soybean Insect Pests*.

Dr. Craig R. Baird is an emeritus faculty member in the Department of Plant, Soil and Entomological Sciences at the University of Idaho. He served for 28 years at the Parma Research and Extension Center in southwestern Idaho. He conducted an integrated research and extension program address-

ing arthropod pest management issues in urban settings and in numerous crops, including alfalfa, hop, mint and potatoes. He also conducted research on bot flies in the genus *Cuterebra* and fleas. He authored over 50 refereed journal articles and numerous extension publications.
