BioOne Complete (complete.BioOne.org) is a full-text database of 200 subscribed and open-access titles in the biological, ecological, and environmental sciences published by nonprofit societies, associations, museums, institutions, and presses.

Your use of this PDF, the BioOne Complete website, and all posted and associated content indicates your acceptance of BioOne's Terms of Use, available at www.bioone.org/terms-of-use.

Usage of BioOne Complete content is strictly limited to personal, educational, and non - commercial use. Commercial inquiries or rights and permissions requests should be directed to the individual publisher as copyright holder.

BioOne sees sustainable scholarly publishing as an inherently collaborative enterprise connecting authors, nonprofit publishers, academic institutions, research libraries, and research funders in the common goal of maximizing access to critical research.

Morphological and molecular evidence refute a broad circumscription for *Pultenaea glabra* (Fabaceae: Mirbelieae), with implications for taxonomy, biogeography, and conservation

Matthew A. M. Renner, Russell L. Barrett, Steve Clarke, James A. R. Clugston, Trevor C. Wilson and Peter H. Weston

The publisher regrets to inform readers that, owing to the incorrect pagination of an earlier paper, the paper by Renner *et al.* published in issue 3 included incorrect final page numbers. This paper was published with pp. 127–179 instead of pp. 225–277. As such, the suggested citation for this paper is as follows:

Renner MAM, Barrett RL, Clarke S, Clugston JAR, Wilson TC, Weston PH (2022) Morphological and molecular evidence refute a broad circumscription for *Pultenaea glabra* (Fabaceae: Mirbelieae), with implications for taxonomy, biogeography, and conservation. *Australian Systematic Botany* 35(3), 225–277. doi:[10.1071/SB21030](https://doi.org/10.1071/SB21030)

These errors have been corrected in the version that is online.

We apologise for the errors and any confusion this may have caused.
