BioOne Complete ([complete.BioOne.org](https://complete.BioOne.org)) is a full-text database of 200 subscribed and open-access titles in the biological, ecological, and environmental sciences published by nonprofit societies, associations, museums, institutions, and presses.

Your use of this PDF, the BioOne Complete website, and all posted and associated content indicates your acceptance of BioOne's Terms of Use, available at [www.bioone.org/terms-of-use](https://www.bioone.org/terms-of-use).

Usage of BioOne Complete content is strictly limited to personal, educational, and non-commercial use. Commercial inquiries or rights and permissions requests should be directed to the individual publisher as copyright holder.

---

BioOne sees sustainable scholarly publishing as an inherently collaborative enterprise connecting authors, nonprofit publishers, academic institutions, research libraries, and research funders in the common goal of maximizing access to critical research.

AUGUST 2005/VOLUME 55 NUMBER 8

## **AIBS and BioOne Team with JSTOR to Put *BioScience* Archives Online**

AIBS and BioOne are working with JSTOR, the not-for-profit online digital archive, to digitize all back issues of *BioScience*. Full-text PDF volumes of *BioScience*, dating from the journal's inception as the *AIBS bulletin* in 1951 up to the most recent five years, are now available at [www.jstor.org](http://www.jstor.org) for searching, browsing, downloading, and printing by patrons whose libraries subscribe to JSTOR's new Biological Sciences Collection.

Soon all individual members of AIBS also will have direct access to the *BioScience* archive files at JSTOR through a members-only section of the AIBS Web site. Details will be announced later this year.

More recent issues of *BioScience*, from January 1999 onward, are already available for library subscribers and AIBS individual members on the Ingenta platform. There is no additional charge to institutional or individual print subscribers for online access, and libraries have the option of subscribing to the online version only. Nonsubscribers can purchase individual articles for \$10 each. For details, please see [www.aibs.org/bioscience/current\\_issue.html](http://www.aibs.org/bioscience/current_issue.html).

## **AIBS Cosponsors "Science @ Work" on Capitol Hill**

AIBS recently joined other scientific societies and universities to cosponsor "Science @ Work," the 11th annual Coalition for National Science Funding exhibition and reception on Capitol Hill. This year's event included poster presentations by more than 30 recipients of grants from the National Science Foundation, representing the breadth of that agency's research and education programs. At least a dozen members of Congress and several dozen congressional staffers attended the event.

## **NEON Design Process on Schedule**

The NEON Design Consortium (NDC) completed its third planning meeting in Estes Park, Colorado, 7–9 June 2005. The agenda included discussions ranging from which science questions NEON should address and how NEON, Inc., should be governed, to where observatories might be located and what elements of sensor technology and infrastructure are essential to the project's success.

Science drives NEON planning, and an important focus of the meeting was to consider three broad science questions comprising a much larger subset of specific research questions that NEON will support:

1. How are ecological systems affected by changes in land use and climate across a range of spatiotemporal scales?
2. How do changes in the availability and distribution of the nation's water affect ecological systems?
3. How do the patterns and movement of genes and organisms across the continent affect biodiversity, ecosystem function, and the spread of infectious diseases and invasive species?

The complex array of infrastructure associated with the three overarching questions prompted detailed discussions about the linkages between questions and subquestions, on the one hand, and the kinds of overlapping observational capabilities required to support a wide range of NEON experiments, on the other. The refinement of infrastructure needs—data rates and volumes, temporal and spatial configurations for sensors, sample collection and archiving—is an ongoing task for the project's planners.

Members of the NDC also discussed the concept that each NEON observatory might consist of a suite of subobservatories deployed across a gradient of landscapes, ranging from urban to suburban, to managed lands (forests, cropland), to native or near-pristine ecosystems. Such a configuration, if it also included an aquatic element (lake, river, or wetland), might support research under all three of NEON's overarching questions.

While NEON's designers are creating a network that will consist of new arrays of sensor technology and cyberinfrastructure, they also recognize the importance of forming partnerships with existing observational systems and with the many federal agencies that conduct ecological research.

"We want to maximize those connections. We don't want to reinvent the wheel," said NEON codirector Bruce Hayden. "Collaborations with existing programs and agencies will help us make NEON a truly continental-scale enterprise."

In addition to forming productive partnerships, a number of other criteria have guided the NDC effort to prioritize and define NEON science, education, and infrastructure. These guidelines include a high science return; the ability to transform ecological science; societal

benefits; technological readiness for build-out and deployment; program balance among initiatives, including a balance between research and education; fulfillment of NSF's requirements for NEON; and accurate and feasible cost projections for both construction and maintenance and operations.

These criteria are also guiding the final phase of NEON design: the creation of a reference design and project execution plan (the NEON engineering blueprint), scheduled for delivery to the NSF in June 2006. To achieve these objectives, the planning process will shift from the 160-member NEON Design Consortium to the program's senior management team and the National Network Design Committee, which will receive input from both the NDC and members of the eco-

logical research community as new documents become available for review.

### **NEON Note: Next Stop, Canada**

NEON will be featured in a special session at the annual meeting of the Ecological Society of America, in Montreal, Canada, 7–12 August 2005. Codirectors Bruce Hayden and William Michener will present an overview of the planning process and an update of the NEON project execution plan now in development. Additional presentations will address the NEON science mission, integrating education with NEON science, and the role of embedded networked sensing in NEON. Special session 10 is scheduled for Wednesday, 10 August, from 8:00 a.m. to 11:30 a.m. For details, visit [www.esa.org/program/specialsession10.html](http://www.esa.org/program/specialsession10.html).
