Abstract: In this paper we propose a catalogue of the Longhorn beetles (Coleoptera, Cerambycidae) of Saudi Arabia. It is the result of several trips (2016, 2017, 2019) to the Kingdom by the authors with Daniele Baiocchi and Gianluca Magnani. A new genus and four new species (*Arabogracilia saudita* gen. nov. and sp. nov., *Enareta samai* sp. nov., *Hyllisia asirica* sp. nov. and *Phytoecia (Pseudoblepisans) arabica* sp. nov. are described. We also describe for the first time the female of *Cantharocetus filippovi* (Plavilstshikov, 1933). Moreover, several new records for the Saudi Arabian fauna and for the Arabian Peninsula are given.

Keywords: Arabian Peninsula, new taxa, Oman, Yemen, Chad.

INTRODUCTION

In collaboration with the Department of Plant Protection of King Saud University (Riyadh, Saudi Arabia), it was possible to organize three entomological journeys devoted to the study of the composition of the arthropod fauna of the Kingdom. We show results of these expeditions here along with a full catalogue of the Cerambycidae fauna of Saudi Arabia.

The Cerambycidae fauna of Saudi Arabia is poorly known and only a few species were recorded in the past. Villiers (1968), Holzschuh (1979, 1993) and Holzschuh & Téocchi (1991) improved this knowledge significantly. We list 72 species and 1 subspecies distributed in 46 genera belonging to 28 tribes pertaining to 3 subfamilies. Three species [*Certallum thoracicum* (Sharp, 1880), *Crossotus arabicus* Gahan, 1896 and *Idactus coquerelii* (Fairmaire, 1890)] as well as one genus (*Certallum* Dejean, 1821) and 1 tribe (Certallini Fairmaire, 1868) are deleted from the list. We list 5 tribes (Graciliini Mulsant, 1839; Callichromatini Swainson & Shukard, 1840; Monochamini Gistel, 1848; Agapanthiini Mulsant, 1839 and Phytoeciini Mulsant, 1839), 9 genera (*Cantharocetus* Westwood, 1866; *Phoracantha* Newmann, 1840;

Yemenobrium Adlbauer, 2005; *Helymaeus* Thomson, 1864; *Anarchambyx* Sama, 2007; *Anoplophora* Hope, 1839; *Enareta* Thomson, 1864; *Hyllisia* Pascoe, 1864 and *Phytoecia* Dejean, 1835) and 2 subgenera (*Dalterus* Fairmaire, 1892 and *Pseudoblepisans* Breuning, 1950) for the first time for the Saudi Arabian fauna. In addition, 12 species are listed for the first time for the Saudi Arabian fauna [*Cantharocetus filippovi* (Plavilstshikov, 1933); *Helymaeus signaticollis* Pascoe, 1878; *Helymaeus pedestris* Pascoe, 1878; *Anarchambyx pippasamai* Sama, 2007; *Yemenobrium velutinum* Adlbauer, 2005; *Phoracantha semipunctata* (Fabricius, 1775); *Crossotus sublineatus* Gestro, 1892; *Crossotus* cf *kadleci* Sama & Sudre, 2010, *Crossotus katbehi* Sama, 2000; *Prosopocera* (*Dalterus*) *dejeani* Gahan, 1890; *Anoplophora glabripennis* (Motschulsky, 1853); *Apomecyna binubila* Pascoe, 1858], 4 species are listed for the first time from Yemen [*Xystrocera dispar* Fähreus, 1872, *Crossotus erlangeri* ssp. *saudicola* Téocchi, 1991, *Crossotus subocellatus* (Fairmaire, 1886) and *Sophronica talhouki* Holzschuh, 1991], 3 species are listed for the first time from Oman (*Derolus incultus* ssp. *yemenensis* Villiers, 1977, *Daramus serricornis* Fairmaire, 1892 and *Eunidia haplotrita* Aurivillius, 1911), 1 species is listed as new

for Chad (*Eunidia nebulosa* Erichson, 1843), and 1 species is listed for the first time from the United Arab Emirates (*Xystrocera dispar* Fähreus, 1872). Among all these taxa, 1 genus (*Arabogracilia* gen. nov.) and 4 species [*Arabogracilia saudita* sp. nov., *Enaretta samai* sp. nov., *Hyllisia asirica* sp. nov. and *Phytoecia (Pseudoblepisans) arabica* sp. nov.] are described as new. The female of *Cantharoctenus filippovi* (Plavilstshikov, 1933) is described and figured for the first time. The composition of the fauna shows a close connection with the African fauna, mainly with respect to the East African region. Only a few elements belong to the Mediterranean system.

MATERIAL AND METHODS

The present study was carried out from 2017 to 2019 in the Kingdom of Saudi Arabia, with a focus on the southwest of the country, mainly in the Asir region, but we also visited several localities in the middle of Saudi Arabia in the province of Riyadh. This information is complemented with that of the samples preserved in the Museum for Arthropods, Plant Protection Department, College of Agriculture and Food Sciences, King Saud University. Moreover, we list all the records found in the literature. The Asir region is particularly diverse in vegetation, with a wide array of habitats resulting in a high biodiversity of animals. It is closely connected with areas of Yemen and shows affinities with the fauna of Ethiopia.

The systematic order used is in accordance with that used in the Catalogue of the Palaearctic Coleoptera (Löbl & Smetana, 2010) and its most recent update (Danilevsky, 2020). The only difference is that when the genus is composed of more than one subgenus, we have listed the species belonging to the nominal subgenus before those of the other subgenera. In square brackets we mention the species removed from the list of the Saudi fauna.

The binocular microscope used to study the insects was a Wild M3, with magnifications 10x6, 10x16 and 10x40. The pictures of prepared specimens were taken using a digital camera Canon 5D Mark II, Focus Stacking with Zerene Stacker with an optical zoom Nikkor EL 75, 5.6 mm and Canon MPE-65, focus 7.1 mm.

We list the collecting data of all of the specimens preserved in the Museum of Arthropods, College of Food and Agriculture, Department of Plant Protection, King Saud University, Riyadh, Saudi Arabia, and we report all of the bibliographical records available for the Saudi Cerambycidae. In the distribution sections the countries of Africa are mentioned from North to South.

In order to obtain freshly emerged larvae, wood samples were collected in the field and taken to the laboratory, where they were kept at room temperature until emergence. For this reason, the date of emergence in artificial conditions may not correspond to the actual collection period in the field.

The abbreviations of geographical divisions are provided as in the Catalogue of Löbl & Smetana (2010), but the Transcaucasian Republics (Armenia, Azerbaijan, and Georgia) are referred to Asia as in Danilevsky (2020).

Distribution: Arabian Peninsula: Yemen (type locality), Saudi Arabia (**new record**).

Description of the female: The female differs from the male mainly in the antennal shape. The antennae are shorter and thinner than in the male and show only one small tooth at the apex of each segment starting from the third. The antennae in the females are made of 22 segments instead of 46 in the males. The antennae reach the base of the elytra when extended posteriorly, while they reach the apical quarter of the elytra in the males. The legs are shorter and slightly slender than in the males and they possess only few teeth on the external side of the tibiae.

Prostype juniperi Holzschuh, 1993: 120-122. Type locality: "Saudi Arabia: Asir Mts., Jebel Sudan nr Abha".

Material examined from Saudi Arabia: Asir Mts., Jebel Suda near Abha, 9.IV.1983, emerged from *Juniperus procera* Hochst. & Endl., 1847, 31.VIII.1983, C. Holzschuh (holotype); idem, emerged between 8.VII and 7.VIII.1983 (Holzschuh, 1993); Abha, Raydah, 18°11.679'N 42°23.691"E, 1851 s.l.m., 26.IV.2014, at light (KSMA); Abha prov., Raedah reserve, 2809 s.l.m., 18°12'14"N 42°24'43"E, 16.IV.2016, ex larva in *Rosa* sp. [Rosaceae], emerged 21.IV, 29.IV, 9.VI, 21.VII, 12.X.2016, P. Rapuzzi lgt; idem, ex larva in *Juniperus procera* [Cupressaceae], emerged 5.VI.2016, P. Rapuzzi lgt; idem, emerged 1-19.VI.2017; Bahah prov., Bani Hassan, 2293 s.l.m., 20°03'02"N 41°26'47"E, 30.III.2017, ex larva in *Juniperus procera*, emerged 10.VII.2017, P. Rapuzzi lgt (CPR).

Distribution: Arabian Peninsula: Saudi Arabia (type locality), Yemen (Danilevsky, 2020).

Cerambycini Latreille, 1802

Cerambycini Latreille, 1802: 211. Type genus: *Cerambyx* Linné, 1758.

Anarchambyx Sama, 2007

Anarchambyx Sama, 2007: 101. Type species: *A. pipposamai* Sama, 2007 (by original designation).

Anarchambyx pipposamai Sama, 2007

Fig. 8

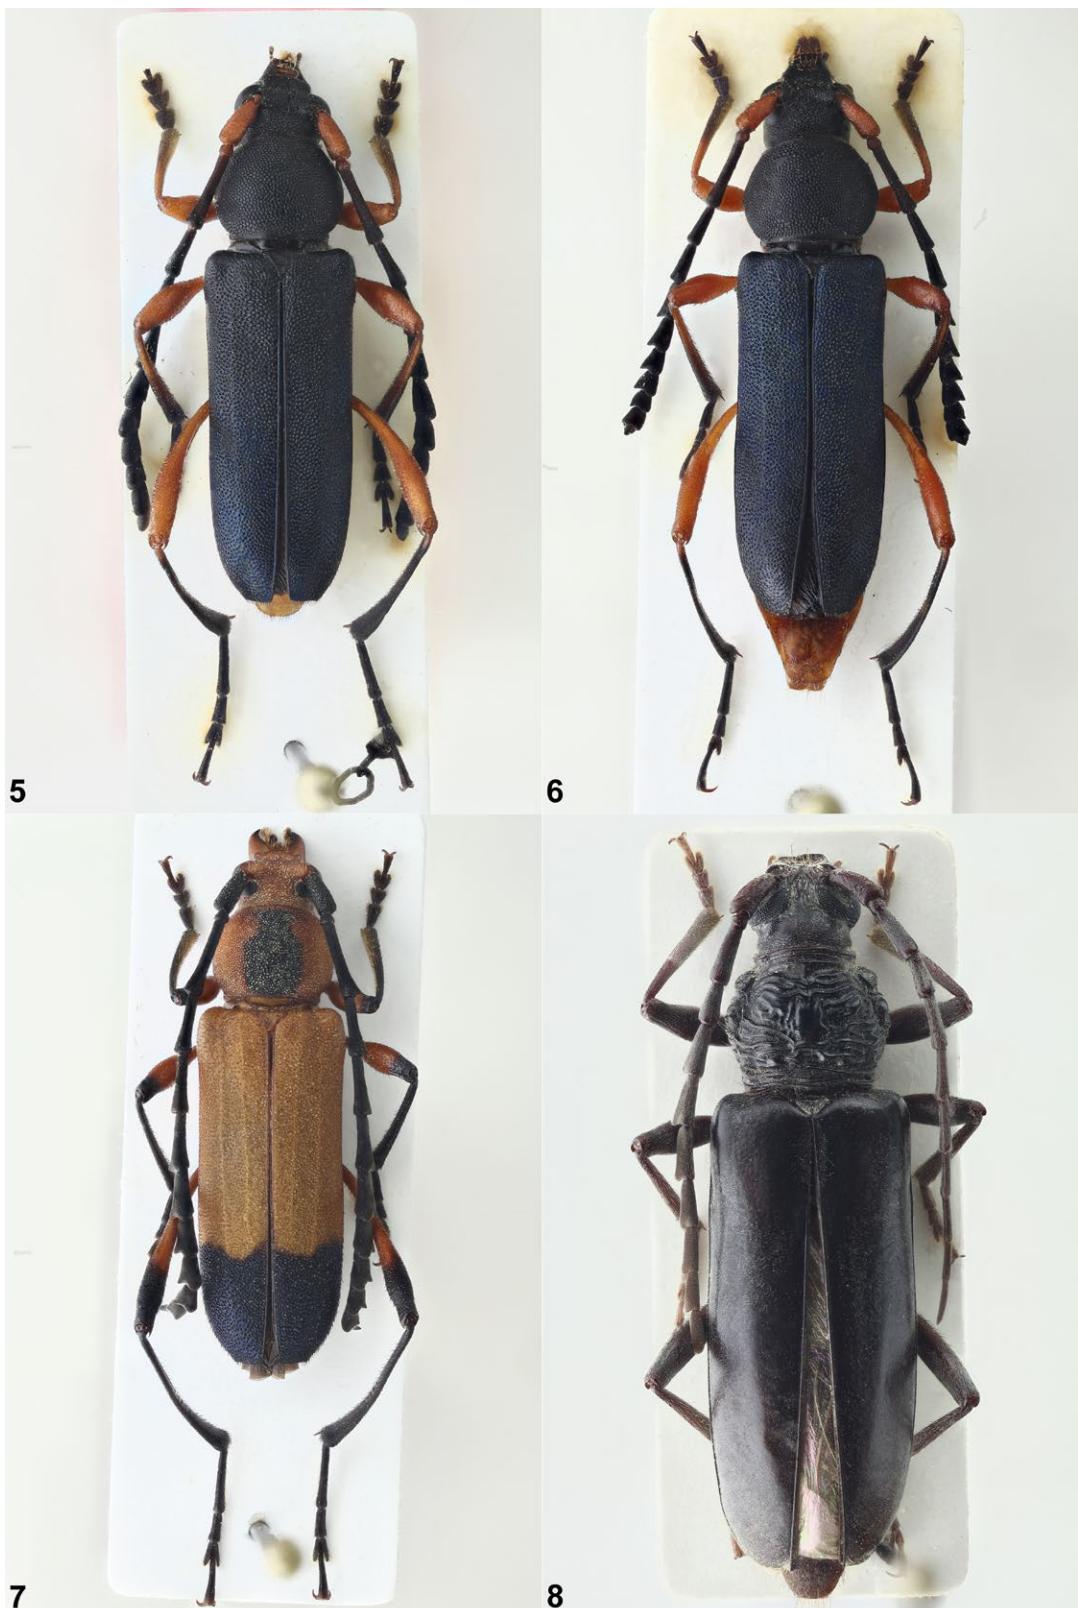

Anarchambyx pipposamai Sama, 2007: 103. Type locality: "Yemen: Mabar".

Material examined from Saudi Arabia: Al Bahah prov., Wadi Tourabah, 20°11'16"N 41°18'38"E, 1812 s.l.m., 6.IV.2019, ex larva in *Acacia* sp., emerged 25.V-25.VI.2019, P. Rapuzzi lgt (CPR).

Distribution: Arabian Peninsula: Yemen (type locality), Saudi Arabia (**new record**).

Derolus Gahan, 1891

Pachydissus (*Derolus*) Gahan, 1891: 26. Type species: *D. arciferus* Gahan (original designation).

Figs 5-8. (5) *Helymaeus pedestris* Pascoe, 1874, male, Abha prov., Wadi Mashwas, 1289 s.l.m., 18°10'06"N, 42°22'01"E, 16.IV.2016, ex larva *Grewia* sp., emerged 30.VI-27.VII.2016, P. Rapuzzi lgt (CPR). (6) *H. pedestris* female, Abha prov., Wadi Mashwas, 1289 s.l.m., 18°10'06"N, 42°22'01"E, 16.IV.2016, ex larva *Grewia* sp., emerged 30.VI-27.VII.2016, P. Rapuzzi lgt (CPR); (7) *Helymaeus signaticollis* Pascoe, 1878, male, Al Baha prov., Shada al Ala, 1358 s.l.m., 19°50'51"N, 41°18'06"E, 14.IV.2016, P. Rapuzzi lgt (CPR). (8) *Anarchambyx pippasamai* Sama, 2007, female, Bahah prov., Wadi Tourabah, 20°11'16"N, 41°18'38"E, 1812 s.l.m., 6.IV.2019, ex larva *Acacia* sp., emerged 25.V-25.VI.2019, P. Rapuzzi lgt (CPR).

Derolus asiricus Holzschuh, 1993

Derolus asiricus Holzschuh, 1993: 117-118. Type locality: "Saudi Arabia: Asir Mts., Shaqiq Sharman".

Material examined from Saudi Arabia: Asir Mts., Shaqiq Sharman, 8.IV.1983, fully developed in its pupal chamber in a dead lactiferous climber, C. Holzschuh (typ. loc.); idem, reared from larvae and emerged from 20.VII to 24.VIII.1983; Fayfa, at light, 27-31.III.1983, C. Holzschuh; Fayfa, 27.IV.1982, collector not given; Wadi Gaanah, 13-14.II.1980, W. Büttiker; Harithi, 21°18'N 40°18'E, 18-19.IV.1985, W. Büttiker (Holzschuh, 1993); Abha, Wadi Rida, 18°11'749"N 42°23'345"E, 1614 s.l.m., 24.II.2014, at light; Abha, Wadi Tourabah, 20°14.369'N 41°15.234"E, 1757 s.l.m., at light; Abha, Raydah, 18°11.749"N 42°23.345"E, 1614 s.l.m., 21.II.2014, at light; idem, 26.IV.2014; Abha, Raydah, 18°11.884'N 42°24.435"E, 2387 s.l.m., 26.IV.2014, at light; Abha, Raydah, 18°11.679'N 42°23.691"E, 1851 s.l.m., 6.VI.2014, at light; Abha, Raydah, 18°11.766'N 42°24.315"E, 2285 s.l.m., 26.IV.2014, at light; Abha, Raydah, 18°12.265'N 42°24.744"E, 2820 s.l.m., 26.IV.2014, at light; idem, 7.VI.2014; Abha, Raydah, 18°12.095'N 42°24.536"E, 2578 s.l.m., 6.VI.2014, at light; Abha, Raydah, 18°11.618'N 42°24.420"E, 1772 s.l.m., 8.VI.2014, at light; Al Baha, Shada Al Ala, 19°50.329'N 41°18.604"E, 1563 s.l.m., 27.VII.2015, at light; idem, 3.VI.2014; idem, 21.IV.2014; Abha, Raydah, 18°11.7749'N 42°23.345"E, 1614 s.l.m., 31.VII.2015, at light; idem, 4.III.2015; idem 26.IV.2014; Al Baha, Shada Al Ala, 19°50.710'N 41°18.267"E, 1474 s.l.m., 23.VIII.2015, at light; Al Baha, Shada Al Ala, 19°52.598'N 41°18.672"E, 892 s.l.m., 21.IV.2014, at light; Al Baha, Shada Al Ala, 19°50.575'N 41°18.691"E, 1666 s.l.m., 3.VI.2015, at light; idem, 2.IX.2015; Al Baha, Shada Al Ala, 19°50.066'N 41°18.037"E, 1325 s.l.m., 5.V.2014, at light; Al Baha, Shada Al Ala, 19°51.762'N 41°13.089"E, 1225 s.l.m., 2.IX.2014, at light; Al Baha, Shada Al Ala, 19°50.411'N 41°18.686"E, 1611 s.l.m., 21.IV.2014, at light (KSMA); Abha prov., Raedah res., 2809 s.l.m., 18°21'14"N 42°24'43"E, 16.IV.2016, ex larva in *Euryops arabica* Steud., 1837 [Asteraceae], emerged 15.VIII.2016, P. Rapuzzi lgt; idem, emerged 15.IV.2017; Asir prov., Jebel Soudah, Raydah res., 18°12'14"N 42°24'43"E, 2810 s.l.m., 11.IV.2019, in pupal cell of *Dodonaea viscosa* Jaq., 1760 [Sapindaceae], P. Rapuzzi lgt; Asir prov., wadi Mashwas, 18°10'06"N 42°22'01"E, 1289 s.l.m., 13.IV.2019, pupal cell of *Cadia purpurea* (G. Piccoli) Aiton (1789) [Fabaceae], P. Rapuzzi lgt; Al Baha prov., Wadi Tourabah, 1830 s.l.m., 20°11'36"N 41°17'50"E, 12.IV.2016, pupal cell on *Prunus* sp. [Rosaceae], P. Rapuzzi lgt; idem, emerged 4.XI.2016; Al Baha prov., 10 km NNW Al Makhwah, 630 s.l.m., 19°50'47"N 41°22'40"E, 31.III.2017, at light, P. Rapuzzi lgt; Al Bahah prov., Jabal Shada al A'la,

1965 s.l.m., 19°50'32"N 41°18'42"E, 29.III.2017, adults under the bark of *Ficus* sp. [Moraceae], P. Rapuzzi lgt; Al Bahah prov., Jabal Shada al A'la, 1286 s.l.m., 19°51'42"N 41°18'15"E, 08.IV.2019, at light, P. Rapuzzi lgt; Bahah prov., Shada al Ala, 1692 s.l.m., 19°50'37"N 41°18'40"E, 8.IV.2019, ex larva from *Ficus* sp., P. Rapuzzi leg.; Abha prov., Wadi Mashwas, 1289 s.l.m., 18°10'06"N 42°22'01"E, 16.IV.2016, at light, P. Rapuzzi lgt; Asir prov., Wadi Marabah, 1197 s.l.m., 18°10'18"N 42°22'12"E, 13.IV.2017, at light, P. Rapuzzi lgt; Asir prov., Jebel Soudah, 1632 s.l.m., 18°11'45"N 42°23'21"E, 2.IV.2017, sugar traps, P. Rapuzzi lgt; Asir prov., Jebel Soudah, Raydah vill. 18°11'42"N 42°23'04"E, 1572 s.l.m., 11.IV.2019, dead inside a spider net, P. Rapuzzi lgt; Bahah prov., Wadi Tourabah, E of An Na'amah, 1826 s.l.m., 20°11'01"N 41°18'42"E, 30.III.2017, in pupal cell on *Kleinia anteuphorbium* (L.) DC., 1838 [Asteraceae], P. Rapuzzi lgt; Bahah prov., Wadi Tourabah, E of An Na'amah, 1812 s.l.m., 20°11'16"N 41°18'38"E, 6.IV.2019, P. Rapuzzi lgt; idem, in pupal cell on *Pistacia* sp. [Anacardiaceae], 6.IV.2019, P. Rapuzzi lgt; idem ex larva from *Pistacia* sp., emerged 19.V.2019, P. Rapuzzi lgt (CPR).

Distribution: Arabian Peninsula: Saudi Arabia (Holzschuh, 1993).

Derolus incultus ssp. *yemenensis* Villiers, 1977

Fig. 9

Derolus incultus ssp. *yemenensis* Villiers, 1977: 166-167. Type locality: "Nord-Yémen (Taizz)".

Material examined from Saudi Arabia: Asir prov., Wadi Marabah, 1197 s.l.m., 18°10'18"N 42°22'12"E, 13.IV.2017, at light, P. Rapuzzi lgt (CPR).

Distribution: Yemen (type locality); Oman, Jebel al Akhdar, N of Birkat al Mouz, 2.III.2008, ex larva from *Moringa peregrina* (Forssk., 1911) (Moringaceae), emerged 22.VII.2008, D. Gianasso leg. (CGS) (**new record**); Saudi Arabia (**new record**).

Derolus martini ssp. *hayekae* Villiers, 1968

Derolus martini ssp. *hayekae* Villiers, 1968: 847-848. Type locality: "Yémen: Taïz".

Derolus martini ssp. *hayekae* Holzschuh, 1979: 293; Holzschuh, 1993: 117.

Material examined from Saudi Arabia: Taif, Ende Mai 1917, leg. Di Lenardo (Holzschuh, 1979); Fayfa, at light, 27-31.III.1983, C. Holzschuh; idem, emerged from *Ficus* (Holzschuh, 1993); Fifa, 27.IV.1982; Asir, Muhayil, Wadi Hali, 18°30.121'N 42°02.219'E, 440 s.l.m., 11.II.2016; Jazan, Fifa, 26.III.2014, at light; Al Baha, Shada Al Ala, 19°52.598'N 41°18.672'E,

892 s.l.m., 3.VI.2014, at light; idem, 20.IV.2014; idem, 21.IV.2014; idem, 23.IV.2014; idem, 24-25.IV.2014; idem, 23.III.2015; idem, 1.III.2015; Abha, Raydah, 18°13.347'N 42°24.133'E, 2717 s.l.m., 25.IV.2014, at light; Al Baha, Shada Al Ala, 19°51.762'N 41°13.089'E, 1225 s.l.m., 21.IV.2014, at light; Abha, Raydah, 18°12.265'N 42°24.744'E, 2820 s.l.m., 26.IV.2014, at light; Al Baha, Shada Al Ala, 19°51.066'N 41°18.037'E, 1325 s.l.m., 3.VI.2014, at light; idem, 21.IV.2014; Al Baha, Shada Al Ala, 19°50.329'N 41°18.604'E, 1563 s.l.m., 3.VI.2014, at light; idem, 21.IV.2014; idem, 27.VII.2014; Al Baha, Shada Al Ala, 19°50.710'N 41°18.267'E, 1474 s.l.m., 23.VIII.2015, at light; idem, 3.VI.2014; idem, 21.IV.2014; Abha, Raydah, 18°12.095'N 42°24.536'E, 2578 s.l.m., 6.VI.2014, at light; Al Baha, Shada Al Ala, 19°50.575'N 41°18.691'E, 1666 s.l.m., 3.VI.2015, at light; Al Baha, Shada Al Ala, 19°50.411'N 41°18.686'E, 1611 s.l.m., 21.IV.2014, at light; Abha, Raydah, 18°11.749'N 42°23.345'E, 1614 s.l.m., 27.IV.2014, at light (KSMA); Al Baha prov., Shada al Ala, 1358 s.l.m., 19°50'51"N 41°18'06"E, 14.IV.2016, ex larva in *Ziziphus* sp. [Rhamnaceae], emerged 14.IV-2.VI.2016, P. Rapuzzi lgt; Al Baha, Mekwah, Shada al Ala, 1248 s.l.m., 19°51'40"N 41°18'16"E, 29.III-1.IV.2017, sugar traps, P. Rapuzzi lgt; Al Bahah prov., Jabal Shada al A'la, 1286 s.l.m., 19°51'42"N 41°18'15"E, 08.IV.2019, at light, P. Rapuzzi lgt; Al Bahah prov., Jabal Shada al A'la, 1965 s.l.m., 19°50'32"N 41°18'42"E, 29.III.2017, adults under the bark of *Ficus salicifolia* Vahl., 1790 [Moraceae], P. Rapuzzi lgt; Bahah prov., Shada al Ala, 1692 s.l.m., 19°50'37"N 41°18'40"E, 8.IV.2019, ex larva in *Ziziphus spinachristi* (L.) Desf., 1798 [Rhamnaceae], emerged 20.VII.2019, P. Rapuzzi leg.; idem, ex larva from *Ficus* sp., emerged 29.VII.2019, P. Rapuzzi lgt; Bahah prov., Wadi Tourabah, E of An Na'amah, 20°11'01"N 41°18'42"E, 1826 s.l.m., 30.III.2017, ex larva in *Kleinia anteuphorbium*, emerged 20.IV.2017, P. Rapuzzi lgt; Bahah prov., Thee Ain, 759 s.l.m., 19°55'47"N 41°26'38"E, 13.IV.2016, at light, P. Rapuzzi lgt; Asir prov., Wadi Marabah, 1197 s.l.m., 18°10'18"N 42°22'12"E, 1-4.IV.2017, at light, P. Rapuzzi lgt (CPR).

Distribution: Arabian Peninsula: Saudi Arabia (Holzschuh, 1979), Yemen (type locality).

Derolus thesigeri Villiers, 1968

Figs 10, 11

Derolus thesigeri Villiers, 1968: 848. Type locality: "Jebel Quarra" (Saudi Arabia).

Material examined from Saudi Arabia: Jebel Quarra, 2.II.1947, W. Thesiger, NHMUK (holotype); Bahah Wadi Tourabah, E of An Na'amah, 20°11'01"N 41°18'42"E, 30.III.2017, ex larva

in *Searsia retinorrhoea* (Steud. ex Oliv.) Moffett, 2002 [Anacardiaceae], emerged 10.VI.2017, P. Rapuzzi lgt; idem, emerged 28.VIII.2017 (CPR).

Distribution: Arabian Peninsula: Saudi Arabia (Villiers, 1968).

Derolus vastus Holzschuh, 1993

Derolus vastus Holzschuh, 1993: 118-120. Type locality: "Saudi Arabia: Hofuf".

Derolus mauritanicus ssp. *iranensis* Holzschuh, 1979: 293.

Material examined from Saudi Arabia: Umgeb. Ryadh, Wadi Hofuf, 9.III.1977 W. Büttiker (under *Derolus mauritanicus* ssp. *iranensis* Pic, 1956 in Holzschuh, 1979); Hofuf, 150 s.l.m., 12-13.IV.1983, dead in a spider's web on the wall of a house, C. Holzschuh (holotype); Hofuf, 9.III.1977, W. Büttiker (Holzschuh, 1993).

Distribution: Arabian Peninsula: Saudi Arabia (Holzschuh, 1993).

Neoplocaederus Sama, 1991

Neoplocaederus Sama, 1991: 123. Type species: *Plocaederus cyanipennis* Thomson, 1860 (original designation).

Neoplocaederus denticornis (Fabricius, 1801)

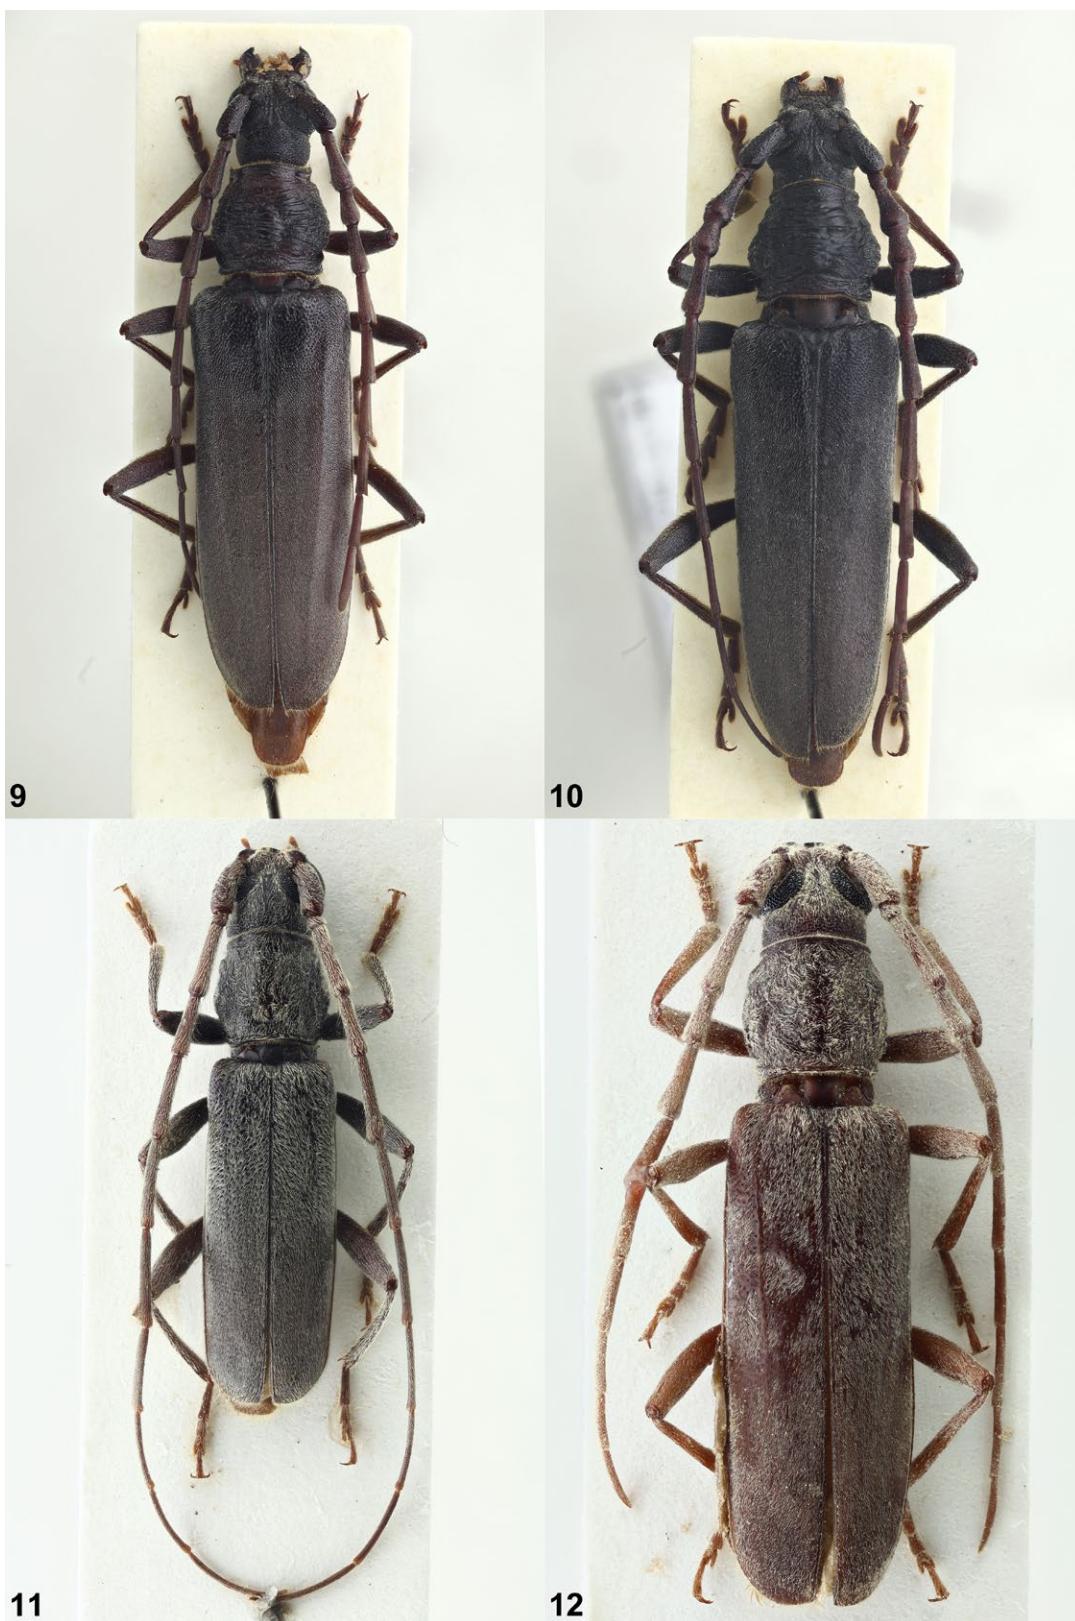

Cerambyx denticornis Fabricius, 1801: 271. Type locality: "Guinea".

Plocaederus denticornis: Villiers, 1968: 847.

Plocaederus atlanticus: Holzschuh, 1993: 117.

Material examined from Saudi Arabia: Dhufar, Jebel Qara, Wadi Ghet, XI.1943, D.V. Fitzgerald; près Mecca, 12.VIII.1944, A.R. Waterston (Villiers, 1968); J. Lebabah, 13.II.1985, W. Büttiker; Ad Darb, 13.II.1985, W. Büttiker; Wadi Juwa, 8.II.1986, J. Grainger; Hesua, 610 s.l.m., 27.IX.1981, W. Büttiker; Jizan, 25-26.III.1983, fully developed in cocoons in a dead *Commiphora opobalsamum* (L.) Engl., 2007 [Burseraceae] tree, emerged from 9.VII to 18.IX.1983, C. Holzschuh (under *Plocaederus atlanticus* Rungs, 1952 in Holzschuh, 1993); Abha, Raydah, 18°11.766'N 42°24.315"E, 1897 s.l.m., 26.IV.2014, at light (KSMA).

Distribution: Senegambia, Guinea Bissau, Guinea, Sierra Leone, Ivory Coast, Ghana, Togo, Nigeria, Cameroon, Chad, Sudan, Djibouti, Somalia, Equatorial Guinea, Congo, Ethiopia, Kenya, Tanzania, Mozambique, Zimbabwe, Angola, Republic of South Africa (Adlbauer & Beck, 2015), Mali (Villiers, 1962), Morocco. Arabian Peninsula: Saudi Arabia, Yemen (Holzschuh, 1993), Oman (Strumia et al., 2007).

Figs 9-12. (9) *Derolus incultus* ssp. *yemenensis* Villiers, 1977, male, Asir prov., Wadi Marabah, 1197 s.l.m., 18°10'18"N, 42°22'12"E, 13.IV.2017, at light, P. Rapuzzi lgt (CPR). (10) *Derolus thesigeri* Villiers, 1968, female, Bahah Wadi Tourabah, E of An Na'amah, 20°11'01"N, 41°18'42"E, 30.III.2017, ex larva *Searsia retinorrhoea*, emerged 10.VI.2017, P. Rapuzzi lgt (11) *D. thesigeri* male, Bahah Wadi Tourabah, E of An Na'amah, 20°11'01"N, 41°18'42"E, 30.III.2017, ex larva *Searsia retinorrhoea*, emerged 10.VI.2017, P. Rapuzzi lgt (CPR). (12) *Xenoderolus arabicus* (Villiers, 1968), male, Al Bahah prov., Jabal Shada al A'la, 1286 s.l.m., 19°51'42"N, 41°18'15"E, 8.IV.2019, at light, P. Rapuzzi lgt (CPR).

***Neoplocaederus elongatus* (Holzschuh, 1993)**

Plocaederus elongatus Holzschuh, 1993: 117. Type locality: "Saudi Arabia: 90 km SE of Khamis Mushayt".

Material examined from Saudi Arabia: 90 km SE Khamis Mushayt, 25.III.1983, C. Holzschuh (holotype) (Holzschuh, 1993); Al Baha, Shada Al Ala, 19°50.710'N 41°18.267'E, 1474 s.l.m., 21.IV.2014, at light; Al Baha, Shada Al Ala, 19°50.066'N 41°18.037'E, 1325 s.l.m., 03.VI.2014, at light; idem, 23.VIII.2014; idem, 14.XI.2015; Al Baha, Shada Al Ala, 19°52.598'N 41°18.672'E, 892 s.l.m., 3.VI.2014, at light; idem, 1.III.2015; Al Baha, Shada Al Ala, 19°50.329'N 41°18.604'E, 1563 s.l.m., 2.IX.2015, at light (KSMA).

Distribution: Arabian Peninsula: Saudi Arabia (type locality).

Xenoderolus Sama, 2007

Xenoderolus Sama, 2007: 98. Type species: *Microderolus arabicus* Villiers, 1968 (by original designation).

***Xenoderolus arabicus* (Villiers, 1968)**

Figs 12, 13

Microderolus arabicus Villiers, 1968: 848. Type locality: "Arabie: Habarut" (Yemen).

Microderolus arabicus: Holzschuh, 1993: 120.

Xenoderolus arabicus: Sama, 2007: 98-101.

Material examined from Saudi Arabia: Shuqayq (NW of Jizan), 0 s.l.m., 2.IV.1983, emerged from *Acacia* 20-21.VIII.1983, C. Holzschuh; Fayfa, running very rapidly after dusk on a *Acacia* sp. branch, C. Holzschuh; Makkah (Holzschuh, 1993; Sama, 2007); Al Baha, Thee Ain, 19°55.774'N 41°28.574E, 754 s.l.m., 10.III.2012; Al Baha, Shada Al Ala, 19°52.598'N 41°18.672'E, 892 s.l.m., 24-25.IV.2014, at light; idem, 3.VI.2014; idem, 12.XI.2015; Jazan, Fifa, 26.III.2014, at light; Al Baha, Shada Al Ala, 19°51.762'N 41°18.089'E, 1225 s.l.m., 3.VI.2014, at light (KSMA); Al Bahah prov., Jabal Shada al A'la, 1286 s.l.m., 19°51'42"N 41°18'15"E, 08.IV.2019, at light, P. ***Chlorophorus capensis* (Laporte & Gory, 1841)**

Clytus capensis Laporte & Gory, 1841: 95. Type locality: "Cap de Bonne-Espérance" (Republic of South Africa).

Chlorophorus capensis: Holzschuh, 1993: 127.

Material examined from Saudi Arabia: 90 km SE Khamis Mushayt, 25.III.1983, ex larva from *Ficus* sp., emerged 16.VII and 30.VIII.1983, C. Holzschuh (Holzschuh, 1993); Baha, Aldawood, 18.VI.2003, ex larva in *Acacia* sp. (KSMA); Bahah prov., Bani Hassan, 2293 s.l.m., 20°03'02"N 41°26'47"E, 30.III.2017, ex larva in *Acacia* sp., emerged 28.VII.2017, P. Rapuzzi lgt (CPR).

Distribution: Republic of South Africa (type locality), Rwanda (Duffy, 1955). Arabian Peninsula: Saudi Arabia (Holzschuh, 1993).

Graciliini Mulsant, 1839

Graciliaires Mulsant, 1839: 99. Type genus: *Gracilia* Audinet-Serville, 1834.

Arabogracilia gen. nov.

Type species: *Arabogracilia saudita* sp. nov.

Diagnosis: The new genus is very similar to the cosmopolitan genus *Gracilia* Audinet-Serville, 1834, with which it notably shares a small body size, the sharpness of the mandibles and the general aspect. However, these two taxa differ in the shape of the eyes, which consist in two lobes connected by a single row of ommatidia in *Gracilia*, while these lobes are connected by several rows of ommatidia in the new genus.

Etymology: The name of the new genus is composed of the words Arabo (from the Arabian peninsula) and Gracilia (in reference to the affinity with this genus).

Description: Male. Small, head and pronotum deeply punctate. Mandibles short, curved toward apex with small subbasal tooth on inner side. Frons large, flat. Eyes complete, not divided. Antennae long and slender, exceeding the apex of elytra when extended posteriorly; third segment shorter than fourth, and 3 times longer than second; segments third to sixth with few erect black apical bristles. Pronotum about twice longer than large, constricted at base and densely punctured; sides regularly rounded. Elytra parallel-sided, slightly constricted before middle; shoulders slightly rounded; disc shallowly depressed longitudinally beside slightly raised suture; pubescence short and dense, consisting of golden recumbent bristles, that pubescence denser at base; presence of several big and deep punctures from where very long erect black setae originate. Legs slender, with femora enlarged in apical half, notably on forelegs; tibiae thin and straight.

Female. Similar to male, but differing as follows: antennae shorter, reaching apex of elytra when extended posteriorly; elytra slightly enlarged toward apex, with very long and sparse erect black setae; golden elytral pubescence less dense, nearly absent toward apex; femora less clavate and legs slightly shorter.

Discussion: After thorough investigations in the field, we were not able to find the type species elsewhere than the type locality, where, however, it was quite abundant in an area limited to only a few square meters. It would be interesting to investigate other areas in SW Saudi Arabia to better assess the range of this taxon.

Arabogracilia saudita sp. nov.

Figs 14-16

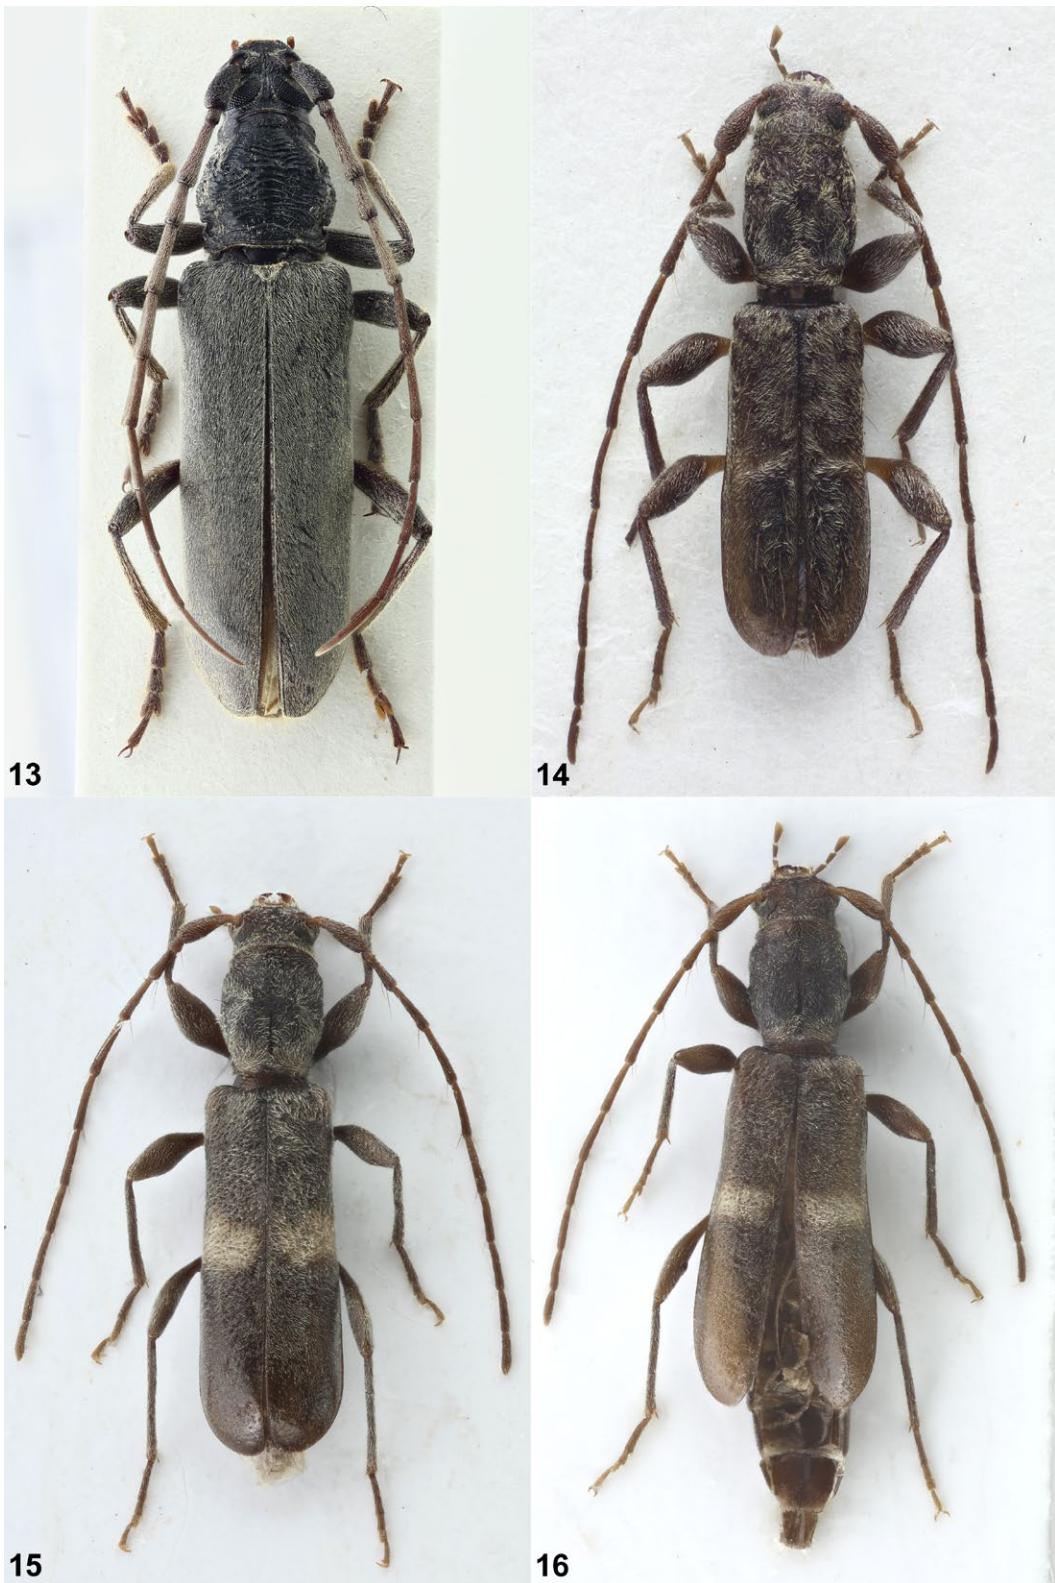

Material examined: Holotype ♂: Saudi Arabia: Abha prov., Raedah reserve, 2809 s.l.m., 18°12'14"N 42°24'43"E, 16.IV.2016, P. Rapuzzi lgt, ex larva from *Dodonaea viscosa*, emerged 12.II.2017 (KSMA);

Allotype ♀: Saudi Arabia: Abha prov., Raedah reserve, 2809 s.l.m., 18°12'14"N 42°24'43"E, 16.IV.2016, P. Rapuzzi lgt, ex larva from *Rosa cf abyssinica* R. Br., 1814, emerged 04.XII.2016 (CPR); Paratypes 3♀: Saudi Arabia: Abha prov., Raedah reserve, 2809 s.l.m., 18°12'14"N 42°24'43"E, 16.IV.2016, P. Rapuzzi lgt (CPR); 4♂ and 3♀: idem, ex larva from *Acacia* sp., emerged from 23.VI to 24.XI.2016 (CPR); 32♂ and 20♀: idem, ex larva in *Rosa cf abyssinica*, emerged from 29.XII.2016 to 1.V.2017 (CPR); 67♂ and 83♀: idem, ex larva in *Dodonaea viscosa*, emerged from 08.V.2016 to 17.IV.2017 (CPR, KSMA); 3♂: Saudi Arabia: Abha prov., Raedah reserve, 2810 s.l.m., 18°12'14"N 42°24'43"E, 02.IV.2017, P. Rapuzzi lgt (CPR); 33♂ and 22♀: idem, ex larva in *Dodonaea viscosa*, emerged 20.IV.2017 (CPR); 13♂ and 9♀: idem, ex larva in *Rosa cf abyssinica*, emerged 27.IV.2017 (CPR); 45♂ and 60♀: idem, emerged 1.V-15.VI.2019; 1♀ Saudi Arabia: Jebel Soudah, Raydah reserve, 18°11'41"N 42°24'18"E, 2255 s.l.m., 11.IV.2019, in pupal cell of *Abutilon bidentatum* A. Ric., 1847 [Malvaceae], P. Rapuzzi lgt (CPR).

Diagnosis: The new species is similar to the related *Gracilia minuta*. It is easy to distinguish according to the characters used to separate the new genus. The type series shows a variability in terms of size and color. In fact, the length is from 2 to 7 mm and the transversal band in the middle of the elytra is variable in terms of width as sometimes it is very thin and sometimes very wide; only rarely it is totally missing. The ground color is from light brown to dark brown.

Etymology: The name *saudita* is derived from Saudi Arabia.

Description: Length 5.5 mm., width 1.0 mm (holotype); length 2.0-6.5 mm (males), 3.0-7.0 mm (females). Dark pitch coloured except for a lighter transverse elytral stripe; apex of femora and antennae yellowish. Head small, with punctuation consisting of dense and small punctures; pubescence generally dense, consisting of short, recumbent golden bristles, becoming denser near mandibles and around eyes; frons transverse, with small medial depression between antennal tubercles. Antennae slender, consisting of eleven segments covered with short, coricate, golden hairs; first three segments entirely yellowish; basal portion of segments four to six dark brown; presence of several long erect black apical setae on each antennomere, those setae denser on first three segments. Pronotum long, twice longer than large, constricted near base, with sides curved, lacking any prominence; with two small flat callosities at basal quarter of disc; punctuation fine and dense, with short but distinctly less punctate medial line; surface uniformly covered with dense coricate golden bristles hiding background color.

Figs 13-16. (13) *Xenoderlus arabicus* (Villiers, 1968), female, Makkah prov., Wadi Shogab, 20°40'26"N, 41°13'23"E, 1426 s.l.m., 5.IV.2019, ex larva from *Acacia* sp., emerged 15.VI.2019, P. Rapuzzi lgt (CPR). (14) *Arabogracilia saudita* sp. nov., paratype male, Abha prov., Raedah reserve, 2809 s.l.m., 18°12'14"N, 42°24'43"E, 16.IV.2016, ex larva in *Dodonaea viscosa*, emerged from 8.V.2016 to 17.IV.2017, P. Rapuzzi lgt (CPR). (15) *A. saudita* paratype male, Abha prov., Raedah reserve, 2809 s.l.m., 18°12'14"N, 42°24'43"E, 16.IV.2016, ex larva in *Dodonaea viscosa*, emerged from 8.V.2016 to 17.IV.2017, P. Rapuzzi lgt (CPR). (16) *A. saudita* paratype female, Abha prov., Raedah reserve, 2809 s.l.m., 18°12'14"N, 42°24'43"E, 16.IV.2016, ex larva in *Dodonaea viscosa*, emerged from 8.V.2016 to 17.IV.2017, P. Rapuzzi lgt (CPR).

Scutellum glabrous, thin and long, rounded toward apex. Elytra parallel-sided, slightly constricted at middle; apex rounded; disc dark brown, divided transversely by yellowish stripe; punctuation fine, denser near base and sparser toward apex; disc covered with golden coricate short bristles; with several much larger and deeper punctures from which originate long and stout black erect setae. Legs long, covered with dense golden pubescence; femora swollen subapically, especially fore femora; base of femora lighter in colour, yellowish; tibiae and tarsi slender.

Female: Similar to male, but body golden pubescence sparser; antennae shorter, reaching only elytral apex when extended posteriorly; elytra enlarged toward apex; elytral sculpture sparser and shallower; legs slender with femura less swollen.

Distribution: The new species is known only from a few places in the Raydah reserve (Abha province, Saudi Arabia).

Remarks: In both sexes the background colouration can be more or less light and the yellow elytral transverse stripe can be interrupted near the suture and reduced to a thin yellow line, or even totally missing (only in a few specimens).

Biology: *Arabogracilia saudita* sp. nov. seems quite polyphagous as it was reared from different plants belonging to different groups: *Rosa cf abyssinica* (R. Br. ex Lindl., 1820) (Rosaceae), *Dodonaea viscosa* (L.) (Sapindaceae) and *Acacia* sp. (Fabaceae). A few specimens were collected running on small dry branches of their host. The larvae start feeding under the bark of small to medium sized twigs of (from 0.5 cm to 3 cm in diameter), and just before pupation they enter the wood where they prepare a pupal cell, which is oval. The adults run very fast on the dry twigs and suddenly stop for a while with the antennae oriented forward, as do *Gracilia minuta* (Fabricius, 1781).

Figs 19, 20

Material examined: **Holotype ♂: Saudi Arabia:** Al Baha, Shada Al Ala, 19°50.575'N 41°18.691'E, 1666 s.l.m., 2.IX.2015, at light (KSMA); **Paratypes.** 1♂: **Saudi Arabia:** Al Baha, Shada Al Ala, 19°50.329'N 41°18.604'E, 1563 s.l.m., 23.VIII.2014, at light (KSMA); 1♂: **Saudi Arabia:** Abha, Raydah, 18°11.749'N 42°23.345'E, 1614 s.l.m., 28.IV.2014, at light (KSMA); 1♀: **Saudi Arabia:** Abha, Raydah, 18°11.749'N 42°23.345'E, 1614 s.l.m., 26.IV.2014, at light (KSMA); 1♂: **Saudi Arabia:** Al Baha, Shada Al Ala, 19°50.329'N 41°18.804'E, 1543 s.l.m., 23.VIII.2014, at light (KSMA); 1♀: **Saudi Arabia:** Abha prov., Raedah reserve, 26.IV.2014, at light (KSMA); 1♀: **Saudi Arabia:** Asir prov., Wadi Marabah, 18°10'18"N 42°22'12"E, 1197 s.l.m., 11.IV.2019, one dead specimen in pupal cell ex *Euphorbia schimperi* C. Presl, 1845 [Euphorbiaceae], P. Rapuzzi *lgt*; 3♂: **Saudi Arabia:** Asir prov., Abha prov., Wadi Mashwas, 1289 s.l.m., 18°10'06"N 42°02'22"E, 16.IV.2016, at light, P. Rapuzzi *lgt*; 1♂: **Saudi Arabia:** Asir prov., Wadi Marabah, 1197 s.l.m., 18°10'18"N 42°22'12"E, 1-4.IV.2017, ex larva from *Euphorbia schimperi*, emerged 15.V.2017, P. Rapuzzi *lgt* (CPR).

Diagnosis: *Hyllisia asirica* sp. nov. most resembles *H. niveovittata* Aurivillius, 1910 from East Africa, from which it differs in having a rather homogeneous body pubescence instead of a pubescence that is irregular and scattered or forming more or less small dense rounded white spots. In addition, *H. asirica* sp. nov. has the elytral apex truncate instead of rounded as in *H. niveovittata*, and the apex of its tegmen have only very few setae, one long and a few very short instead of a tuft of setae of equal length in *H. niveovittata*.

Etymology: The name *asirica* derives from the Asir province (Saudi Arabia).

Description: Length 10.0 mm; width 2.3 mm (holotype); paratype males 9.0-11.9 mm, females 9.9-11.9 mm. Body brownish-black, dorsum covered with ochraceous pubescence. Head oriented downward, frons two times longer than wide, covered with ochraceous pubescence denser near inner ocular margin and on genae, and presence of few erect black setae near eyes;

deeply punctured tegumen hidden by pubescence; temples straight; frons slightly convex; presence of deep medial furrow between antennal tubercles; occiput with distinct carina in middle. Antennae very long, 2 times longer than body when extended posteriorly, brownish-black and more or less densely covered with ochraceous pubescence; the latter pubescence denser on lower side and sparser on upper side of first antennomere; presence of several short, black, erect setae on inner side of antennomeres 2 to 4 only. Pronotum longer than wide, cylindrical, shallowly depressed subbasally, with sides fairly straight except middle section slightly arcuate; whitish pubescence forming three lines, one extended medially on entire length and the others along lateral margins (not visible from above); presence of few isolated black erect laterobasal setae; punctuation deep, hidden by pubescence. Scutellum two times longer than wide, rounded toward apex; disc slightly swollen at middle, nearly glabrous except for a few ochraceous setae in middle. Elytra parallel-sided, slightly constricted subapically; disc convex, with suture slightly swollen; apex truncate; disc uniformly covered with dense and deep irregular punctures; pubescence dense, consisting of recumbent short ochraceous bristles, lacking erect setae. Legs short; tarsi long, especially apical tarsomere. Apex of tegmina with only very few setae, one long and three or four very short on each tegmen.

Female: Similar to male except body stouter and antennae shorter, 1.5X body length.

Distribution: The new species is endemic to Southwest Saudi Arabia.

Ancylonotini Lacordaire, 1869

Ancylonotides Lacordaire: 299, 301. Type genus: *Ancylonotus* Laporte, 1840.

Idactus Pascoe, 1864

Idactus Pascoe, 1864: 273. Type species: *Idactus tridens* Pascoe, 1864 (by monotypy).

Idactus bettoni Gahan, 1898

Idactus Bettoni Gahan, 1898: 46-47. Type locality: "Samburu and Voi, British East Africa" (Kenya).

Idactus bettoni: Téocchi, 1988: 17; Holzschuh & Téocchi, 1991: 303.

Saudi Arabia: Fayfa, 23.X.1983 (Téocchi, 1988); Fayfa, at light, 27-31.III.1983, C. Holzschuh (Holzschuh & Téocchi, 1991); Al Atif-Maccah road, 21°50'51"N 40°59'27"E, 8.XI.2011; Al Baha, Shada Al Ala, 19°52.717'N 41°18.712"E, 825 s.l.m., 2-3.III.2015, at light; Al Baha, Shada Al Ala, 19°52.598'N 41°18.672"E, 892 s.l.m., 2-3.III.2015, at light (KSMA).

Distribution: Ethiopia, Somalia, Kenya, Tanzania, Malawi, Mozambique, Zimbabwe, Botswana, Namibia. Arabian Peninsula: Saudi Arabia (Téocchi, 1988).

[*Idactus coquereli* (Fairmaire, 1890)]

Dichosthates coquereli Fairmaire, 1890: 551. Type locality: "Massouah" (Massaoua, Erythrea).

Idactus coquereli: Adlbauer *et al.*, 2008: 1174; Adlbauer & Beck, 2015: 114.

Material examined from Saudi Arabia: None (see Note below).

Distribution: Ethiopia, Djibouti, Somalia, Kenya. Arabian Peninsula: Yemen, Oman (Adlbauer & Beck, 2015).

Note: This record is due to a mistake. Adlbauer *et al.* (2008) and later Adlbauer & Beck (2015) reported Saudi Arabia as part of the range of this species based on Holzschuh & Téocchi (1991), but in this paper no record of *I. coquereli* is reported for Saudi Arabia. However, the presence of this species in the Kingdom is very probable.

Idactus cristulatus (Fairmaire, 1886)

Pogonoherus cristulatus Fairmaire, 1886: 458. Type locality: "Obok" (Djibouti).

Idactus assimilis Breuning, 1938: 214-215. Type locality: "Arabien: Ktubu" (Yemen).

Idactus cristulatus: Villiers, 1968: 849; Holzschuh & Téocchi, 1991: 303.

Material examined from Saudi Arabia: Jeddah, Buraiman, 16.III.1946, and Lith, I.1945; Dhufor, Jebel Qara, Wadi Geth, XI.1943; Lith, "10 m inland", I.1945 (Villiers, 1968); Fayfa, at light, 27-31.III.1980, C. Holzschuh; Fayfa, reared from *Calotropis procera* (Aiton) W. T. Aiton, 1810 [Apocynaceae], emerged 12.IV.1983, C. Holzschuh; Fayfa, 3.X.1984, A. S. Talhouk; Gizan, at light, 25-26.III.1983, C. Rapuzzi lgt; Asir

prov., 28 km SSE Muhayl, 809 s.l.m., 18°17'55"N 42°07'41"E, 5.IV.2017, in pupal cell on *Calotropis procera*, P. Rapuzzi lgt; Asir prov., Wadi Marabah, 1197 s.l.m., 18°10'18"N 42°22'12"E, 13.IV.2019, ex larva in *Calotropis procera*, emerged 19.V.2019, P. Rapuzzi lgt (CPR).

Distribution: Mali, Ethiopia, Somalia, Ivory Coast, Cameroon, Central African Republic, Tanzania, Mozambique, Zimbabwe, Republic of South Africa. Arabian Peninsula: Saudi Arabia, Yemen, Oman (Adlbauer & Beck, 2015).

Pseudoparaphloeus Sama, 2009

Pseudoparaphloeus Sama, 2009: 25. New name for *Paraphloeus* Breuning, 1968: 61. Type species: *Paraphloeus scorteccii* Breuning, 1968 (by original designation and monotypy).

Pseudoparaphloeus scorteccii (Breuning, 1968)

Paraphloeus scorteccii Breuning, 1968: 92. Type locality: "Arabie: Taiz, 1350 s.l.m." (Yemen).
Paraphloeus scorteccii: Holzschuh & Téocchi, 1991: 303.

Material examined from Saudi Arabia: Fayfa, at light, 27-31.III.1983, C. Holzschuh (Holzschuh & Téocchi, 1991); Al Baha, Shada Al Ala, 19°52.598'N 41°18.672"E, 892 s.l.m., 21.IV.2014, at light (KSMA).

Distribution: Arabian Peninsula: Saudi Arabia, Yemen (Adlbauer & Beck, 2015). A subspecies (*erythreensis* Téocchi, 1992) occurs in East Africa (Erythrea).

Apomecynini Thomson, 1860

Apomecynitae Thomson, 1860: 66. Type genus: *Apomecyna* Dejean, 1821.

Apomecyna Dejean, 1821

Apomecyna Dejan, 1821: 108. Type species: *Saperda alboguttata* Megerle, 1802 (= *Lamia histrio* Fabricius, 1793) (by monotypy).

Apomecyna binubila Pascoe, 1858

Figs 21, 22

Apomecyna binubila Pascoe, 1858: 253. Type locality: "Natal" (Republic of South Africa).

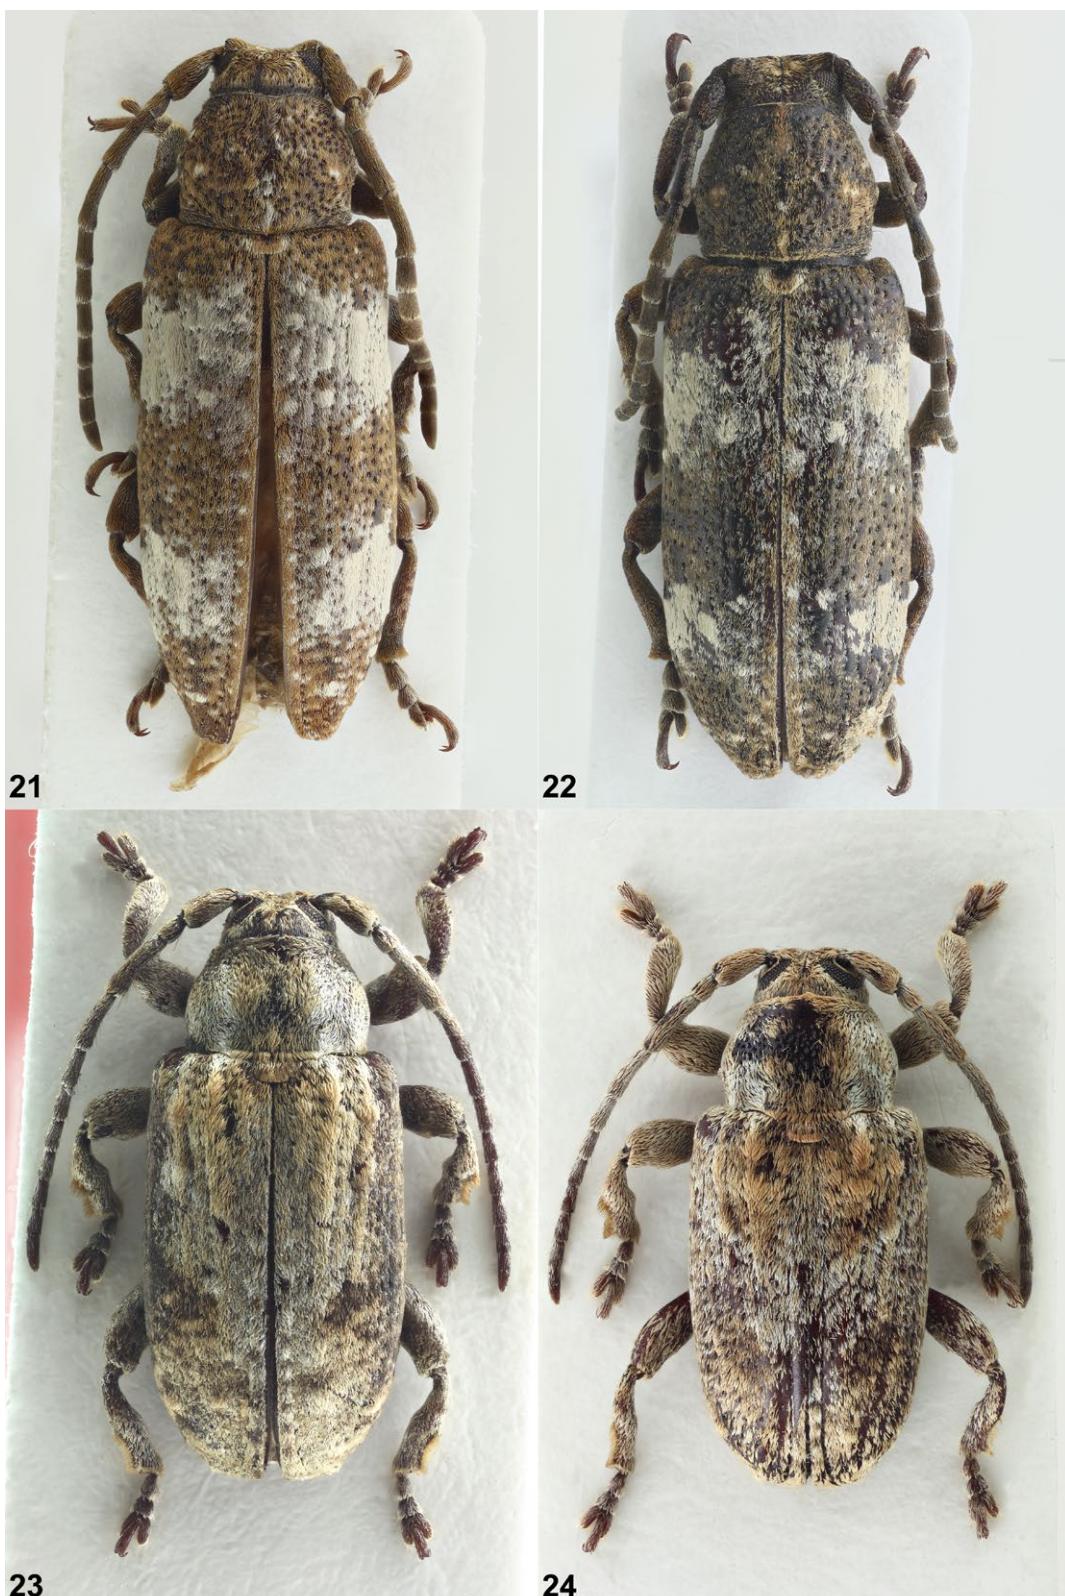

Material examined from Saudi Arabia: Asir prov., Wadi Ksan, 3 km N of Hubeil, 18°08'57"N 43°13'56"E, 462 s.l.m., ex pupa from *Citrullus colocynthis* (L.) Schrad., 1838 [Cucurbitaceae], 12.IV.2019, P. Rapuzzi lgt (CPR).

Distribution: Senegal, Niger, Sudan, Ethiopia, Somalia, Guinea-Bissau, Guinea, Sierra Leone, Ivory Coast, Ghana, Togo, Benin, Nigeria, Congo, Rwanda, Tanzania, Angola, Zambia, Malawi, Zimbabwe, Mozambique, Namibia, Botswana, Republic of South Africa (Adlbauer & Beck, 2015). Arabian Peninsula: Saudi Arabia (**new record**).

Apomecyna lameerei (Pic, 1895)

Eurycotyle Lameerei Pic, 1895: 77. Type locality: "Arabia".
Apomecyna arabica Breuning, 1938: 50. Type locality: "Arabie: La Mecque".
Apomecyna lameerei: Villiers, 1968: 849; Holzschuh, 1979: 294; Amin *et al.*, 1986: 312; Holzschuh & Téocchi, 1991: 301.

Material examined from Saudi Arabia: Mecca district, Bir Sanoeia, 12.VIII.1944, A.R. Waterston; Buraiman, près Jeddah, 18.XI.1944, à la lumière, A.R. Waterston; Musaina, 23.V.1938, H.St.J.B. Rapuzzi lgt; idem, many specimens ex larva from *Citrullus colocynthis*, emerged 01.V-20.V.2019, P. Rapuzzi lgt; Ryadh prov., W of Al Hulwah, Ibex reserve, 23°26'56"N 46°39'59"E, 635 s.l.m., 3.IV.2019, under twigs of *Citrullus colocynthis*, P. Rapuzzi lgt; Ryadh prov., Wadi Nesah, 24°13'35"N 46°51'14"E, 570 s.l.m., 4.IV.2019, under twigs of *Citrullus colocynthis*, P. Rapuzzi lgt; Al Qassim prov., NE Abu Marwah, 22°09'33"N 42°12'02"E, 1001 s.l.m., 5.IV.2019, P. Rapuzzi lgt (CPR).

Distribution: Mauritania (Rungs, 1952), Western Sahara (Breuning, 1953), Niger, Chad, Senegal, Djibouti (Lepesme & Breuning, 1955), Mali (Villiers, 1962), Sierra Leone (Mourglia & Téocchi, 1994), Egypt, Morocco, Iran, Iraq, Israel, Pakistan (Löbl & Smetana, 2010). Arabian Peninsula: Saudi Arabia, Yemen (Löbl & Smetana, 2010), Oman (Ambrus & Grosser, 2012).

Note: In Al Uyaynah (756 m, 24°53'36"N 46°17'31"E) on 2.IV.2019, we collected a pair of specimens under twigs of *Cucumis prophetarum* L., 1758 (Cucurbitaceae). These specimens are different from *A. lameerei* in the pubescence which is almost totally missing (it is only represented by two whitish incomplete transverse bands on the elytra), and the elytral punctures are sparser and larger. It is possible that these specimens belong to a new species, but it would be necessary to study a larger number of specimens before a decision can be reached on the real status of this population. Moreover, all of the specimens of *A. lameerei* that we have studied (several hundreds of specimens from Mauritania to Iran) strictly live on *Citrullus colocynthis* (Cucurbitaceae) and the use of a different species of plant is really suspicious.

Apomecyna scorteccii Breuning, 1968

Apomecyna scorteccii Breuning, 1968: 90. Type locality: "Yemen: El Haurat, 1550 s.l.m."

(Walter Grosser private collection, Czech Republic); 1♀: **Oman:** Dhofar, Jabal al Qamar, 15 km W Al Mughsayl, 16°51'44.56"N 53°43'18.38"E, 26.IX.2011; W. Grosser leg. (Walter Grosser private collection, Opava, Czech Republic).

Diagnosis: All of the specimens of *E. samai* sp. nov. from the Arabian Peninsula (Saudi Arabia and Oman) that we checked differ from *E. caudata* in several characters: elytral apex truncate and not flat in *E. samai* instead of extended to a flat apex in *E. caudata*; tooth at the external side of the elytral apex of *A. caudata* lacking in *E. samai*; elytra entirely covered with light pubescence in *E. samai*, while only partly covered in *E. caudata*; pronotal punctuation denser and larger in *E. samai* than in *E. caudata*. The new species is much more like *Enareta somaliensis* Breuning, 1938 from Somalia, from which it is easily separated by the pubescence pattern: in *E. somaliensis* the orange pubescence is darker and more developed, and the light pubescence is white instead of whitish, resulting in a more contrasting colour pattern than in *E. samai*. In addition, the pubescence is arranged in longitudinal stripes made by alternate denser and sparser areas in the new species whereas the pubescence is more homogeneous in density in *E. somaliensis*.

Etymology: We dedicate this new species to Gianfranco Sama (Cesena, Italy), who recently passed away, in gratitude for transmitting his knowledge to one of us (Pierpaolo Rapuzzi) as one of the greatest connoisseurs of the longhorn beetle fauna of the desert areas of the Arabian countries.

Description: Length 6.2 mm., width 3.0 mm. Body dark brown, entirely covered with light pubescence. Head small, densely covered with yellowish pubescence entirely hiding tegumen, that pubescence darker on vertex; frons square with deep medial furrow; eyes large, largely faceted; lower eye lobe very close to mandibles. Antennae short, reaching half of elytral length when extended posteriorly; scape and pedicel covered with orange pubescence, that on remaining antennomeres whitish. Pronotum bell-shaped, strongly constricted apically and larger at base; sides evenly curved; pubescence dense, predominantly yellowish, consisting of recumbent, strong bristles; presence of few thin, erect, black laterobasal setae; disc with two dark yellow/orange lines forming an inverted Y

reaching apical margin; tegumen with sculpture coarse, consisting of big dense punctures, except apex densely covered with very fine punctures. Scutellum wider than long, covered with orange pubescence. Elytra short, oval, with apex truncate; pubescence orange on disk beside suture up until first quarter, then thinner and reaching apex in small thin line covered with dark yellow/orange pubescence; rest of elytra covered with whitish pubescence; both kinds of pubescences (whitish and yellow) arranged in denser and sparser longitudinal stripes giving a striped appearance; each elytron less pubescent at middle, giving the appearance of a darker median line interrupted near suture; with two small tufts of orange pubescence at base of elytra as well as two near apex, the latter forming a sort of arch. Legs short and robust, covered with dense whitish pubescence intermixed with black recumbent hairs; femora short, swollen in middle; hind and median tibiae strongly arched and bearing long fringe of orange erect setae; front tibiae straight and swollen subapically, lacking orange fringe.

Female: Very similar to the male, but with antennae shorter, reaching just before half of the elytral length when extended posteriorly.

Distribution: The new species is endemic to the Arabian Peninsula (Oman, Saudi Arabia, and probably Yemen).

Biology: We collected a dead specimen in a pupal cell inside a branch of *Acacia* sp.

Notes: The known specimens are very similar in color except that those from Oman are darker with sparser light pubescence and a wider and larger dark median stripe. In the absence of further distinctive characters, we consider this variation as intraspecific. Genus *Enareta* was reported from the Arabian Peninsula based on specimens collected in Yemen and identified by K. Adlbauer as *Enareta caudata* (Fähreus, 1872). This record was reported in the Catalogue of the Palaearctic Cerambycidae (Löbl & Smetana, 2010: 231) and in its subsequent revision by M. Danilevsky (2020: 324), where a record from Oman made by Grosser & Ambrus (2012: 454) was also reported. In our opinion this record of *E. caudata* from Yemen is strongly suspicious and most likely refers to the new species. However, we couldn't examine these specimens, nor other from the same area to confirm our hypothesis.

Distribution: Arabian Peninsula: Saudi Arabia (?), Oman, Yemen (Sudre et al., 2007).

Note: The records from Saudi Arabia are doubtful. We haven't seen any specimens of this species collected in the Kingdom and very likely the old records belong to another species unknown at the time (*Crossotus katbeh* Sama, 2000), which is common and widespread in a large part of Saudi Arabia. We prefer to delete this species from the list of the Saudi Arabian species until confirmed records are provided.

Saudi Arabia: Asir Mts., Straße von Abha nach Gizan, km 28, Wadi ad Dilla, 700 s.l.m., 22.IV.1976, Wittmer & Büttiker (Holzschuh, 1979, under *Crossotus albicollis* Guérin, 1844); Fayfa, 27-31.III.1983, emerged from Acacia, 21.VIII.1983, C. Holzschuh; idem, emerged 12.IV.-11.IX.1983; NW of Shuqayq, Muhail, 500 s.l.m., 4.IV.1983, emerged ex Acacia, 12.IV.1983, C. Holzschuh; Muhayel, 4.III.1986; road from Abha to Gizan, km 28, Wadi Ad Dilla, 700 s.l.m., 22.IV.1974, Wittmer & Büttiker (Holzschuh & Téocchi, 1991); Al Baha prov., Shada al Ala, 1358 s.l.m., 19°50'51"N 41°18'06"E, 14.IV.2016, ex larva in *Acacia* sp., emerged 14.IV.-2.VI.2016, P. Rapuzzi lgt; Al Bahah prov., Jabal Shada al A'la, 1286 s.l.m., 19°51'42"N 41°18'15"E, 08.IV.2019, at light, P. Rapuzzi lgt (CPR).

Distribution: Arabian Peninsula: Saudi Arabia (Sudre et al., 2007), Yemen (Jabal Bura, NEE Al Hudaydah, 14°52'N 43°24'E, 240-350 s.l.m., 4.XI.2010, S. Kadlec lgt) (NMHP); Yemen, Wadi Zabid, W of Zabid, 14°09'N 43°32'E, 325 s.l.m., e.l., 22.III.2007, M. Rezek leg. (CGS) (**new record**).

Note: Danilevsky (2020: 336) synonymized *Crossotus erlangeri* ssp. *saudicola* with *C. vagepictus* Fairmaire, 1886. In our opinion this synonymy is wrong. In fact, *C. vagepictus* has a dark line in the middle of the pronotum which is missing in *C. e. saudicola* for which the pronotum is entirely covered with whitish pubescence. Moreover, the tufts of pubescence on the elytral disc consists of golden bristles in *C. vagepictus* whereas it consists of black bristles in *C. e. saudicola*.

1826 s.l.m., 20°11'01"N 41°18'42"E, 30.III.2017, ex larva in *Pistacia* sp., emerged 1.IX.2017, P. Rapuzzi lgt; Bahah prov., Shada al Ala, 1692 s.l.m., 19°50'37"N 41°18'40"E, 8.IV.2019, P. Rapuzzi leg.; Asir prov., Wadi Mashwas, 18°10'06"N 42°22'01"E, 1289 s.l.m., 13.IV.2019, ex larva from *Cadia purpurea*, emerged 15.X.2019, P. Rapuzzi lgt; idem, emerged 21.III.2020 (CPR).

Distribution: Arabian Peninsula: Yemen (Sama & Sudre, 2010), Saudi Arabia (**new record**).

Note: The specimens collected in Saudi Arabia differ from *C. kadleci* in several characters, notably the color of the pubescence, which is dark grey instead of yellowish, and the missing longitudinal elytral stripes that are well marked in *C. kadleci*. However, more specimens of the Saudi Arabian population are needed to assess its real status.

Crossotus katbeh Sama, 2000

Figs 27, 28

Crossotus katbeh Sama, 2000. Type locality: "Arava valley: Israel".

Crossotus subocellatus Holzschuh, 1979: 294. (Misidentification).

Crossotus strigifrons: Holzschuh & Téocchi, 1991: 304. (Misidentification).

Material examined from Saudi Arabia: Asir Mts., Straße von Abha nach Gizan, km 28, Wadi ad Dilla, 700 s.l.m., 22.IV.1976, W. Wittmer & W. Büttiker [under *Crossotus subocellatus* (Fairmaire, 1886); identification according to picture of specimen in Holzschuh' (1979); the same specimens were identified as *Crossotus strigifrons* by Holzschuh & Téocchi (1991)]; Riyadh area; Muzahimiyah, Al Khararah, 24°24'24"N 46°14'40"E, 26.IV.2011, at light; Jizan-Aiban Sabia road, Shahdan, 17°28.266'N 42°51.191'E, 433 s.l.m., 13.XI.2012; Al Baha, Shada Al Ala, 19°52.598'N 41°18.672'E, 892 s.l.m., 21.IV.2014, at light; idem, 22.IV.2014; idem, 3.VI.2014; idem, 8.XII.2014; idem, 13.XI.2015 (KSMA); Ryadh prov., Farheat Sheaal, 591 s.l.m., 22°24'34"N 46°35'34"E, 17.IV.2016, ex larva in *Acacia* sp., emerged 1.V.2016, P. Rapuzzi lgt (CPR).

Distribution: Arabian Peninsula: Saudi Arabia (Holzschuh & Téocchi, 1991); Yemen (about 12 km NW Manakhah, 24.VI-4.VIII.2003; Manakhah, Bani Mansu, 1500 s.l.m., 15°06'N 43°50'E, 15.X.2001) (**new record**).

Sophronica wittmeri Holzschuh, 1991

Sophronica wittmeri Holzschuh, 1991: 308-309. Type locality: "Saudi Arabia: Gizan".

Material examined from Saudi Arabia: Gizan, at light, 25-26.III.1983, C. Holzschuh (holotype); idem, ex dry twigs of *Euphorbia triaculeata* Forssk., 1913 [Euphorbiaceae], emerged between 22.V & 7.VIII.1983; Gizan, Sabiyah, 16.II.1985, W. Büttiker; Fayfa, 1240 s.l.m., 23.IX.1981, W. Büttiker; Fayfa, at light, 27-31.III.1983, C. Holzschuh; Asir Mts., NW of Shuqayq, Muhail, 500 s.l.m., 4.IV.1983, ex dry *Euphorbia triaculeata*, emerged 17.VI.1983, C. Holzschuh; Wadi Juwa, 8.II.1986, J. Grainger (Holzschuh & Téocchi, 1991).

Distribution: Arabian Peninsula: Saudi Arabia (Holzschuh & Téocchi, 1991), Yemen (Danilevsky, 2020).

Sybrinus Gahan, 1900

Sybrinus Gahan, 1900: 12. Type species: *Sybrinus commixtus* Gahan, 1900 (by monotypy).

Sybrinus albosignatus Breuning, 1948

Sybrinus (Arabosybrinus) albosignatus Breuning, 1948: 16. Type locality: "Arabie: Aden" (Yemen). *Sophroniella albosignata*: Holzschuh & Téocchi, 1991: 306.

Material examined from Saudi Arabia: Fayfa, 27-31.III.1983, ex larva in *Calotropis procera*, emerged 6.V., 9.VII.1983; Hofuf, 28.VI.1981, collector not given (Holzschuh & Téocchi, 1991); Asir prov., 2 km N of Habeel, 489 s.l.m., 18°07'12"N 42°13'55"E, 3.IV.2017, ex larva in *Calotropis procera*, emerged, 14.VI.2017, P. Rapuzzi lgt; idem, emerged 30.XI.2017; idem, emerged 28.VIII.2017; Asir prov., 3 km N of Habeel, Wadi Ksan, 462 s.l.m., 18°06'57"N 42°13'56"E, 12.IV.2019, in pupal cell in *Calotropis procera*, P. Rapuzzi lgt; idem, ex larva from *Calotropis procera*, emerged 1-28.II.2020, P. Rapuzzi lgt (CPR).

Distribution: Arabian Peninsula: Saudi Arabia, Yemen, Socotra Island (Hájek & Kabátek, 2012).

Sybrinus flavescens Breuning, 1948

Sybrinus (Arabosybrinus) flavescens Breuning, 1948: 16. Type locality: "Arabie: Aden" (Yemen). *Sophroniella flavescens*: Holzschuh & Téocchi, 1991: 306.

Material examined from Saudi Arabia: Najran, 24.III.1983, ex larva in *Calotropis procera*, emerged 4.IV., 17.IV., 31.VII., 4.IX.1983 (Holzschuh & Téocchi, 1991); Wadi Targ, 19°37.385'N 42°18.020'E, 1317 s.l.m., 14.III.2012, at light (KSMA); Asir prov., 2 km N of Habeel, 489 s.l.m., 18°07'12"N 42°13'55"E, 3.IV.2017, at light, P. Rapuzzi lgt (CPR).

Distribution: Arabian Peninsula: Saudi Arabia, Yemen (Hájek & Kabátek, 2012).

Eunidiini Téocchi, Sudre & Jiroux, 2010

Eunidiini Téocchi, Sudre & Jiroux, 2010: 13. Type genus: *Eunidia* Erichson, 1843.

Eunidia Erichson, 1843

Eunidia Erichson, 1843: 262. Type species: *Eunidia nebulosa* Erichson, 1843 (monotypy).

Eunidia arabica Breuning, 1968

Eunidia arabica Breuning, 1968: 89. Type locality: "Arabie: U. Ezone; U. El Kasaba" (Yemen).

Eunidia arabica: Holzschuh & Téocchi, 1991: 298.

Material examined from Saudi Arabia: Fayfa, at light, 27-31.III.1983, C. Holzschuh (Holzschuh & Téocchi, 1991).

Distribution: Yemen (type locality); Saudi Arabia (Danilevsky, 2020).

Eunidia breuningae Villiers, 1951

Eunidia breuningae Villiers, 1951: 201, fig. 1. Type locality: "Aïr: Agadez, Niger".

Eunidia submarmorata Breuning, 1968: 91. Type locality: "Yemen, Est di Radà, Rocce Nere, 1880 s.l.m.". Synonymy in Holzschuh & Téocchi, 1991.

Eunidia naviauxi Villiers, 1977: 168. Type locality: "Nord-Yémen, Achali". Synonymy in Holzschuh & Téocchi, 1991.

Eunidia breuningae: Holzschuh, 1979: 293; Holzschuh & Téocchi, 1991: 298.

Material examined from Saudi Arabia: Asir Mts., Straße Abha nach Gizeh, km 28, Wadi ad Dilla, 700 s.l.m., 22.IV.1976, Wittmer & Büttiker (Holzschuh, 1979); Asir Mts., Khamis Mushait, 15.VII.1981, A.S. Figs 35-37

Material examined: Holotype ♂: Saudi Arabia: Baha, Wadhi Gala, 20°08'079"N 41°20'561"E, 1900 s.l.m., 16.V.2011 (KSMA); Paratypes. 1♂: idem (KSMA); 1♀: Al Bahah prov., Jabal Shada Al A'la, 1559 s.l.m., 19°50'16"N 41°18'38"E, 29.III.2017, flying, P. Rapuzzi lgt (CPR).

Diagnosis: The new species mostly resembles *Phytoecia* (*Pseudoblepisani*s) *cylindricollis* (Kolbe, 1893) from Western Africa. However, it is easily separated by the larger black portion of the elytra, the antennae totally black instead of partly reddish in the central portion, and by the ventral body colour predominantly black instead of orange.

Etymology: The name indicates the origin of the species from the Arabian Peninsula.

Description: Length 12.0 mm., width 3.5 mm (holotype). Body orange, except antennae and apical part of elytra black, ventral surface (except part of abdominal segments) black with several short silvery erect setae. Head wide, with frons transverse and large; punctuation dense and very deep, consisting of granules umbilicate and occasionally fused with adjoining ones; with very thin carina between eyes; presence of few erect dark setae on occiput and just behind eyes, and few light setae close to mandibles, the latter long and darkened toward apex. Antennae black, longer than body when extended posteriorly with last three segments exceeding the apex, slightly enlarged toward apex; antennomeres 1 to 3 bearing several short black setae on inner side, and antennomeres 4 to 6 bearing few short black erect setae on inner side of apex. Pronotum cylindrical, slightly longer than wide; lateral sides fairly straight, except middle portion slightly sinuate; apical and basal margins very thin, impunctate; disc deeply and densely punctate, except small swollen and shiny area in middle; pubescence denser laterally on margin and subbasally, consisting of very short and very sparse erect brownish bristles. Scutellum apically rounded, nearly impunctate, bearing few golden erect setae denser near apical margin. Elytra parallel-sided, slightly constricted toward apex, the latter rounded;

Figs 33-37. (33) *Dinocephalus heissi* Holzschuh, 1991, male, Al Bahah prov., Jabal Shada al A'la, 1286 s.l.m., 19°51'42"N, 41°18'15"E, 8.IV.2019, on *Acacia* sp., P. Rapuzzi lgt (CPR). (34) *D. heissi* female, Asir prov., Wadi Marabah, 1197 s.l.m., 18°10'18"N, 42°22'12"E, 1-4.IV.2017, on *Acacia* sp., P. Rapuzzi lgt (CPR). (35-37) *Phytoecia (Pseudoblepisani) arabica* sp. nov, holotype male, Baha, Wadhi Gala, 20°08'079"N, 41°20'561"E, 1900 s.l.m., 16.V.2011 (KSMA). (35) Dorsal view. (36) Ventral view. (37) Lateral view.

punctuation consisting of several longitudinal rows of punctures, the latter becoming gradually smaller toward apex; tegumen densely microsculptured, making elytra appearing dull; presence of few short and erect dark setae along lateral margins, these setae on orange parts and nearly black on black portion of elytra. Legs stumpy, orange except for slightly darkened tarsi and subapical portion of hind tibiae; middle tibiae on external side bearing short fringe of dense golden hairs as well as small tooth medially.

Female: Similar to male except body slightly stouter and antennae shorter, exceeding the elytral apex with the last two segments when extended posteriorly.

Distribution: The species is apparently endemic to Southwest Saudi Arabia.

Biology: The female collected in Jabal Shada A'la was flying around a plant of *Carduus* cf. *pychnocephalus*, possibly the host of the species.

Note: This species is very interesting because it is the first record for the subgenus *Pseudoblepisansis* for the Arabian Peninsula, the Asian continent, and the Palaearctic Region.

Freapomecyna holzschuhi Téocchi, 1991: 300-301. Type locality: "Saudi Arabia: Fayfa".

Kerochariesthes holzschuhi: Adlbauer, 2002: 19.

Material examined from Saudi Arabia: Fayfa, at light, 27-31.III.1983, C. Holzschuh (Holzschuh & Téocchi, 1991).

Distribution: Arabian Peninsula: Saudi Arabia (type locality), Yemen (Löbl & Smetana, 2010).

ACKNOWLEDGEMENTS

We are grateful to Dr Maurizio Pavesi and Dr Andrea Sabbadini (Museo Civico di Storia Naturale, Milano, Italy), Dr Luca Bartolozzi (Museo di Storia Naturale "La Specola", Firenze, Italy) for providing us with part of the literature and for the loan of several specimens preserved in their collections. Dr Max Barclay (Natural History Museum, London, United Kingdom) for the data on several specimens preserved in this museum. Special thanks to Dr Gianleonardo Allasia (Rome, Italy) for his great help with the identification of the plants from which many specimens hatched. Special thanks are also due to Mr Gianfranco Sama (Cesena, Italy), a great friend and great teacher to one of us (Pierpaolo Rapuzzi); he recently passed away, but previously provided us with literature and opened his collection for this study. Finally, we want to thank Dr Daniele Baiocchi (Rome, Italy) and Dr Gianluca Magnani (Cesena, Italy), partners of many entomological trips with Pierpaolo Rapuzzi and for the opportunity to study all of the Cerambycidae that they have collected. Finally, we are very grateful to Dr Maurizio Gigli (Rome, Italy), Dr Gianluca Magnani (Cesena, Italy) and Dr Daniele Baiocchi for taking and arranging the photographs of the present publication.
