Abundance, Distribution and Migration Patterns of North American Eared Grebes (*Podiceps nigricollis*)

Electronic supplement to: W. Sean Boyd, Nik Clyde, André Breault, Robbie Di Paolo and Malcolm McAdie. 2021. Abundance, Distribution and Migration Patterns of North American Eared Grebes (*Podiceps nigricollis*). Waterbirds 44: 76-85.

APPENDIX

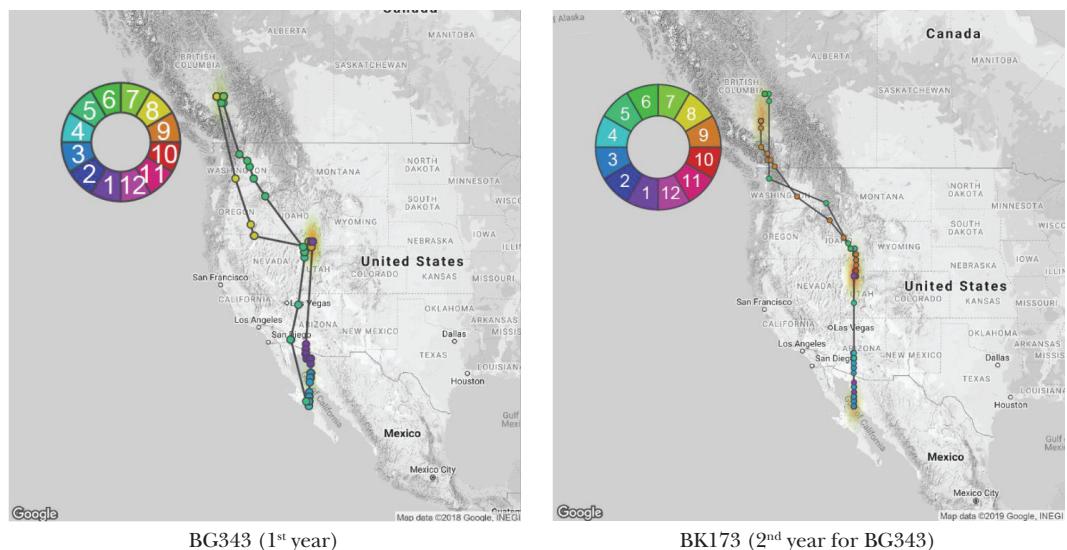

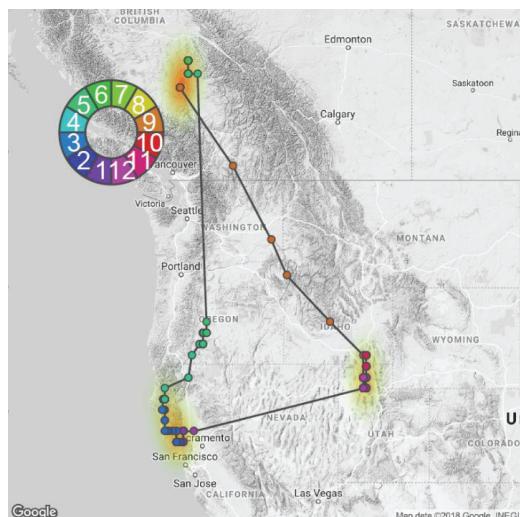

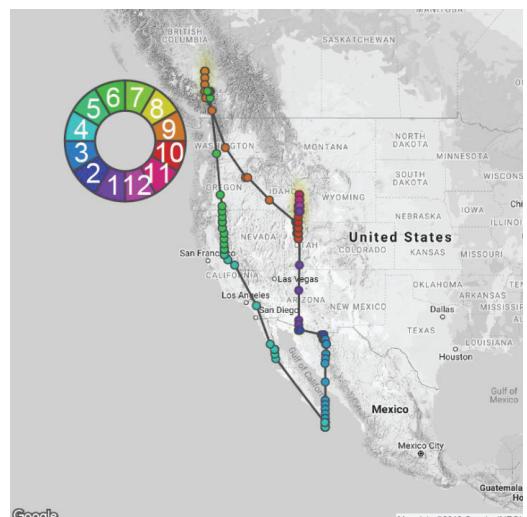

Figure 1A. Migration routes for Eared Grebes (*Podiceps nigricollis*) marked with light-level geolocator (GLS) tags at Riske Creek, British Columbia, Canada in 2017 and 2018. The color of each location corresponds to the month of the year indicated on the color wheel. GLS tags BG343 and BK173 were attached to the same individual but in subsequent years (so, 2 annual cycles). The map for GLS tag BG343 also describes 2 annual cycles but the tag stopped recording before the grebe returned to Riske Creek. GLS tag BK170 stopped recording while the individual was overwintering in Mexico.

Figure 1A. (Continued) Migration routes for Eared Grebes (*Podiceps nigricollis*) marked with light-level geolocator (GLS) tags at Riske Creek, British Columbia, Canada in 2017 and 2018. The color of each location corresponds to the month of the year indicated on the color wheel. GLS tags BG343 and BK173 were attached to the same individual but in subsequent years (so, 2 annual cycles). The map for GLS tag BG314 also describes 2 annual cycles but the tag stopped recording before the grebe returned to Riske Creek. GLS tag BK170 stopped recording while the individual was overwintering in Mexico.

The color of each location corresponds to the month of the year indicated on the color wheel. GLS tags BG343 and BK173 were attached to the same individual but in subsequent years (so, 2 annual cycles). The map for GLS tag BG314 also describes 2 annual cycles but the tag stopped recording before the grebe returned to Riske Creek. GLS tag BK170 stopped recording while the individual was overwintering in Mexico.

Table 1A. Migration summary for Eared Grebes (*Podiceps nigricollis*) marked with light-level geolocator (GLS) tags at Riske Creek, British Columbia, Canada in 2017 and 2018. Values for the timing of migration and the median estimated location of stopover sites and wintering areas were generated using the *stationary_migration_summary* function in package *FlightR*. Lat/long values for capture/recapture events were obtained by locating the centroid of the small pond where individuals were captured. Approximate locations were assigned to known areas (e.g., Great Salt Lake) when those areas were within ~100 km of the coordinates generated by *FlightR*.
